Why VIVAX VRF?

High efficiency

VIVAX VRF systems are equipped with a new four-way heat exchanger which has increased heat transfer efficiency due to a larger heat exchange area and together with a DC Inverter technology, refrigerant sub-cooling and inovative compressor design contribute to high-efficiency performance and low operation costs of the VIVAX VRF systems.

Advanced technology

VIVAX VRF systems have a full DC inverter compressor and a DC fan motor with stepless speed control which enable precise control and power input reduction. VMV 5H outdoor units use enhanced vapor injection compressors and refrigerant sub-cooling technology.

High comfort

VIVAX VRF indoor units are equipped with a DC fan motor with a wide range of fan speed and could easily be adapted to the user needs. Systems have a wide range of control solutions from infra-red and wired controllers, central control, smart WI-FI control through a mobile app, to various bms solutions through the Modbus, BACnet, KNX and Lonworks protocols. Outdoor temperature operation range from -27 °C in heating and up to 52 °C in cooling makes VIVAX VRF systems capable to fit in almost any design.

Easy installation

The outdoor unit can automatically address the indoor units through the module on the PCB. It is more convenient and time saving as there is no need to manually set the addresses on each indoor units separately. Rotating design of the electronic control box allows easy access to all internal system components, and saves time during maintenance. Refrigerant pipes can be connected from four different directions which makes the piping installation simpler while saving time and material.

VIVAX. FOREVER.

2004
First VIVAX air conditioners on the market.

2005
First inverter, mobile and cassette air conditioners.

2006
The first multi-splits and the first accessories for air conditioners.

2007
The first floor-ceiling air conditioner.

2008
The second generation of commercial and multi-split air conditioners.

2011
The third generation of multi-split air conditioners.

2013
The fourth generation of multi-split air conditioners. The third generation of commercial air conditioners.

2014
Super free match system was introduced. 59 air conditioners in the offer.

2015
The fifth generation of multi-split air conditioners.
The fourth generation of commercial air conditioners.
The first Wi-Fi air conditioners, 61 devices in the offer.

2016
The sixth generation of multi-split air conditioners. The fifth generation of commercial air conditioners. 65 different air conditioners in the offer.

2017
It was developed an air conditioner that works at outdoor temperature of -32 °C, both during heating and cooling mode.
73 different air conditioners in the offer.

2018
The seventh generation of multi-split air conditioners. The sixth generation of commercial air conditioners. Best Buy Award 2018 / 2019.

2019
Popular R Design in new colours. R32 gas in all air conditioners. Corrosion protection agent in outdoor units. Qudal Award 2019 / 2020.

2020
The first generation of heat pumps.

2021
Present in more than 35 countries.

2022
90 different airconditioners in the offer.

2023
Expansion of the air conditioning range to VRF air conditioning systems.

2024
VIVAX 20 YEARS

We are proudly celebrating 20 years, always strivingnot only provide top quality products,but also a memorable experience.

Present in **more than 35** countries

Already 20 years users in **over 35 markets** have had trust in VIVAX air conditioners.

Top quality and timeless design have found their way to many homes, which, thanks to the VIVAX air conditioners and regardless of the season, are always at the optimum temperature.

Advanced technology

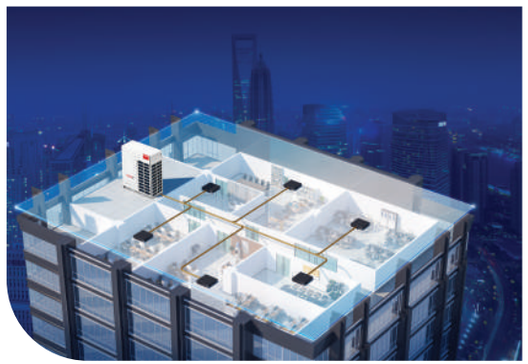
Flexible long piping design

- 1000 m maximum total piping length
- 220 m maximum actual piping length
- 110 m / 90 m maximum height difference between ODU and IDU (ODU higher / IDU higher)
- 30 m maximum height difference between IDU and IDU)

** For the total piping length between 300 m and 1000 m, and height difference grater than 50 m please contact your supplier*



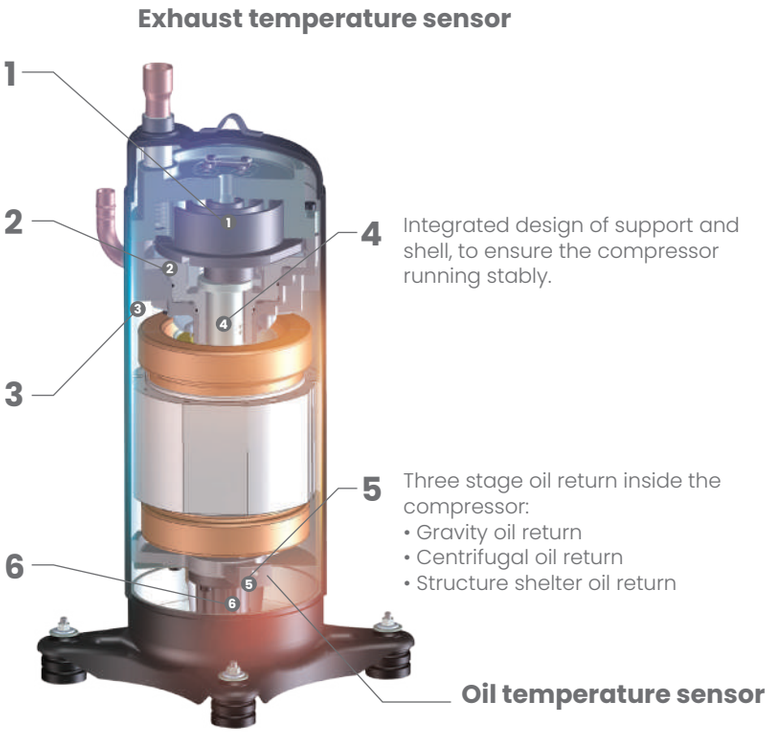
Optimized condenser coil design

The condenser coil is split in half and refrigerant flow through each part is independently controlled by the separate electronic expansion valve. In this way refrigerant flow and heat exchange area are always optimized to match the indoor units load demand, thus increasing the heat exchange efficiency and improving the system performance.

		Max. length	Pipe in left figure
Single way total pipe length (=total liquid pipe length)		1000 m	L1 + L2 + L3 + L4 + L5 + L6 + L7 + L8 + L9 + L10 + L11 + L12 + L13 + L14 + L15
Single way max. pipe length (max. length between outdoor & indoor) actual length		220 m	L1 + L3 + L5 + L7 + L14 + L13
Main pipe actual length (length between first gather pipe & first branch pipe)		130 m	L5
Pipe length after first branch pipe (length between first branch & farthest indoor)		90 m	L7 + L13 + L14
The distance between the nearest indoor unit and the farthest indoor		40 m	L13 + L14 - L12
Pipe length among outdoor units (length between first gather pipe & farthest outdoor unit)		10 m	L1 + L3
Height difference between indoors		18 m	h2
Height difference between outdoors		5 m	h1
Height difference between indoor & outdoor	Indoor below outdoor (between highest outdoor & lowest indoor)	50 m	H1
	Indoor above outdoor (between lowest outdoor & highest indoor)	40 m	H2

High efficiency

Increased efficiency with full DC inverter compressor



1 — Soft scroll plate design, compared with the common scroll plate, it reduce the leakage loss and mechanical loss, more efficiency.

2 — The soft structure and overpressure protection of unloading valve, both of them can effectively reduce stress loss. The compressor is more stable and also efficiency.

3 — We adopted High pressure chamber compressor, and low oil rate structure design, to ensure the reliable oil supply of the compressor, and lubricate all parts effectively.

4 — Integrated design of support and shell, to ensure the compressor running stably.

5 — Three stage oil return inside the compressor:
- Gravity oil return
- Centrifugal oil return
- Structure shelter oil return

6 — Adopt new type oil cup design, reduce the disturbance of high speed rotation to oil level, also reduce the oil discharge, improve lubrication efficiency, reduce frictional loss.

Matches up inverter with stepless compressor, the durability and stability of the compressor are guaranteed, fault can be reduced.

Each compressor is adopted oil temperature sensor and the discharge temperature sensor, detecting the discharge temperature and oil temperature of compressor, cooperated with the compressor frequency and the EEV control, to ensure exhaust heat and oil temperature superheat kept within the optimal range. Ensure that the oil dilution is maintained at a safe level at all times.

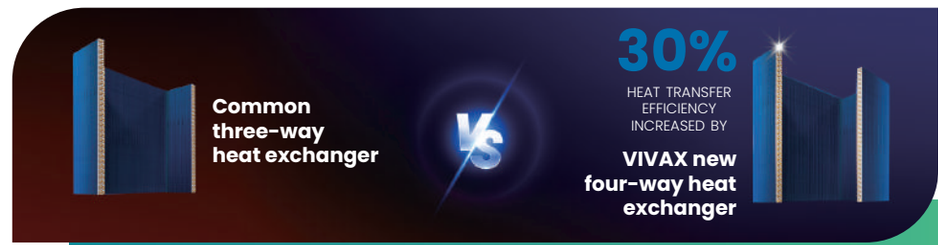
DC inverter stepless fan motor

The outdoor fan motor has stepless inverter regulation technology and is able to operate in the 0-91 Hz frequency range which increases efficiency.stepless frequency.

Temperature approaching technology

The main problem of an ordinary inverter VRF system lies in that its compressor starts and stops frequently, stopping when the room temperature reaches the setting temperature and restarting when the same becomes higher than the setting temperature. Though the inverter technology has improved such a problem greatly, the energy consumption caused by system restart is still a problem that cannot be ignored. VMV 5 series units adopts the temperature approaching technology, which enables the VRF system to maintain a low-frequency operating state all the time when the room temperature is close to the setting temperature but doesn't reach the setting temperature, thus avoiding the energy waste caused by frequent on / off.

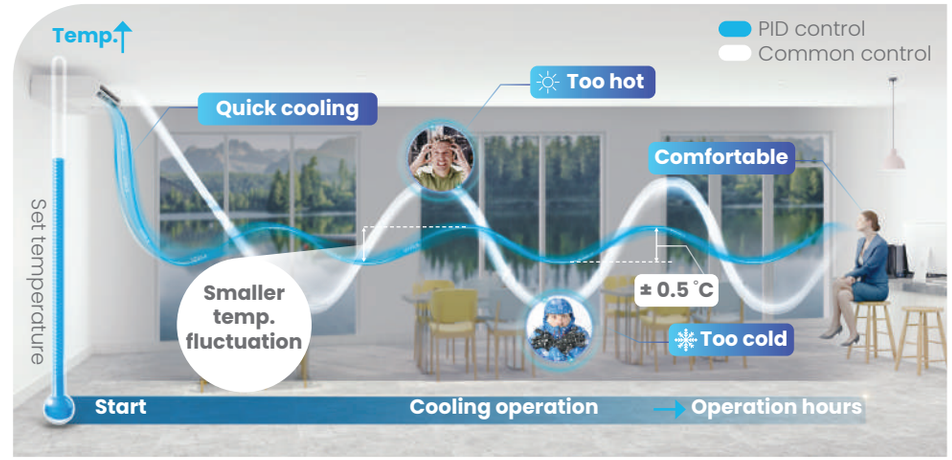
New four-way heat exchanger



High comfort

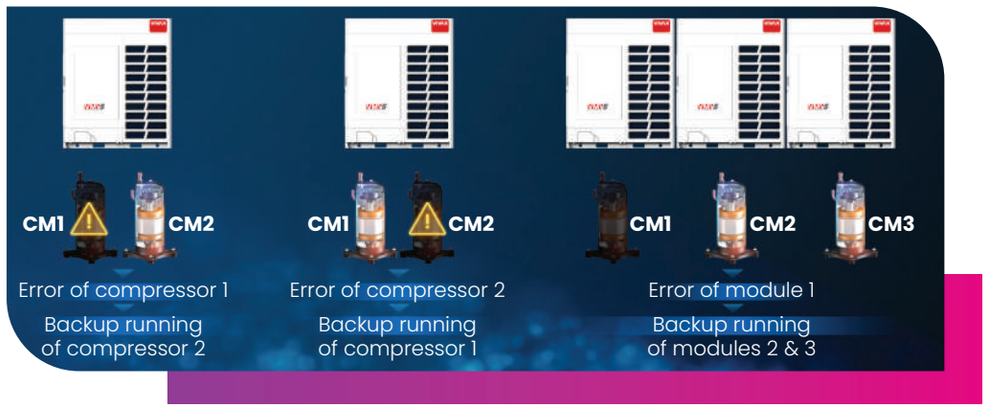
Wide operation temperature range

The operation in heating and cooling are improved and temperature limits are -23 °C in heating and 50 °C in cooling.



Precise temperature control

The VMV 5 units are equipped with double pressure sensors and double electronic expansion valves which enable the automatic refrigerant volume adjustment. With this technology indoor temperature could be controlled by 0.5 °C steps improving the comfort.



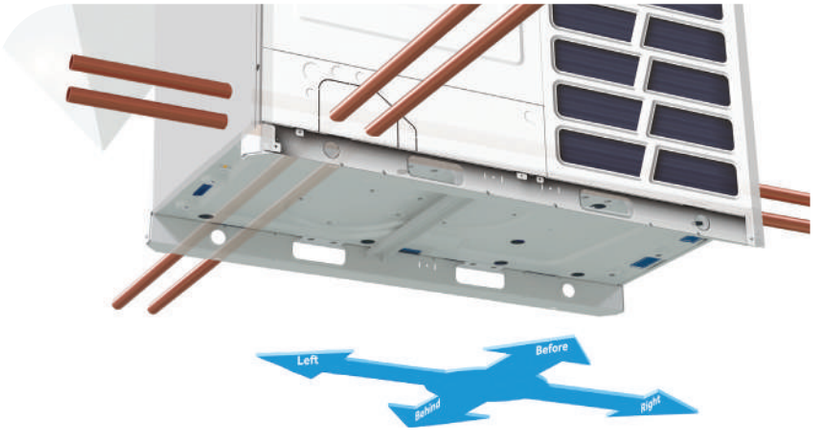
Intelligent backup operation technology

In the case of a compressor malfunction another compressor (single outdoor unit with two compressors) or outdoor unit (multi module outdoor system) will enter in the backup operation. Units will continue to operate for 8 hours allowing the time for repair while providing the indoor comfort.

Easy Installation

Four-way refrigerant piping connection

Refrigerant pipes can be connected from four different directions which makes the piping installation simpler while saving time and material.



110 Pa external static pressure

External static pressure of outdoor unit air outlet can be set up to 110 Pa which allows multiple installation options.

Installation of duct

The outdoor unit is hidden inside the building without affecting the overall image of the building

Auto addressing indoor units

The outdoor unit can automatically address the indoor units through the module on the PCB. It is more convenient and time saving as there is no need to manually set the addresses on each indoor units separately.

Automatic oil balancing

In the multi module outdoor system the oil level in every module is balanced automatically. In such system there is no need for oil balancing pipes which simplifies the system design and improves reliability.

Automatic snow and dust removal

The outdoor unit has the function of preventing snow accumulation on top of the unit. The dust can be blown away from the outdoor heat exchanger by reversing the operation of the fan.

Night time low noise operation mode

It is possible to set the low noise operation mode which reduces the sound level by 10 dB(A). This function is useful when units are installed in residential areas, as well as in other noise-sensitive places.

DC INVERTER
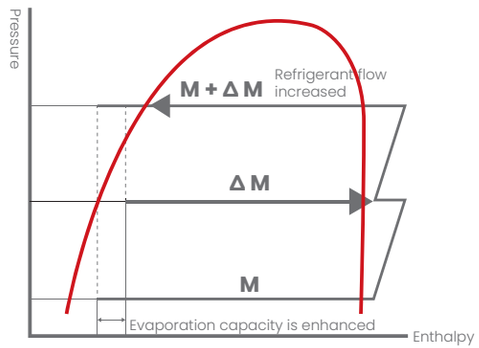
High efficiency
Super comfort
Easy installation

High Efficiency

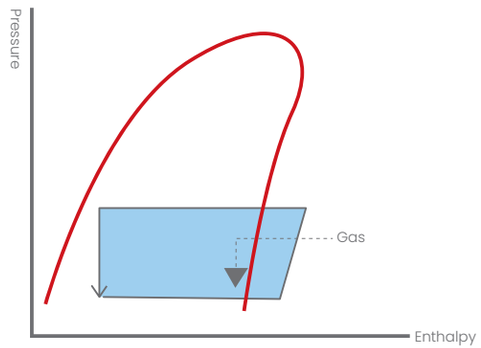
EVI compressor and two-stage subcooling

VMV 5H units are equipped with a refrigerant sub-cooler and an enhanced vapor injection compressor. It is increasing the system performance and capacity in the wide range of ambient conditions, increasing the compressor efficiency, and reducing the operation costs.

EVI compressor



Normal compressor

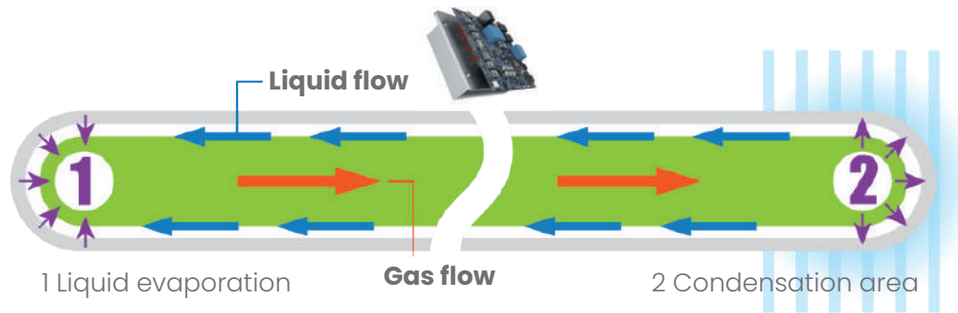


DC inverter stepless fan motor

The outdoor fan motor has stepless inverter regulation technology and is able to operate in the 0-91 Hz frequency range which increases efficiency.

Superconducting refrigerant cooling PCB technology

Adopt innovative super heat conduction cooling PCB technology, heat transfer media conduct heat 100 times better than copper. Does not occupy the refrigerant amount of the system, no additional refrigerant loss. At the same time, this cooling mode will not affect the rotation of the electric control box, easy maintain.



1 Liquid evaporation

2 Condensation area

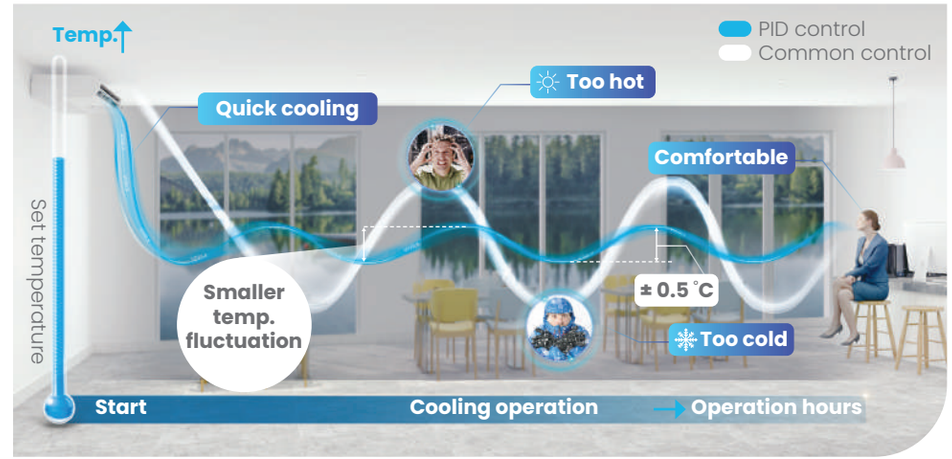
High comfort

Continuous heating technology

The VMV 5H units have intelligent defrost technology. During the light and medium defrost demand, defrosting is achieved by a hot-gas bypass ensuring the continuous heating and maximum comfort during defrosting of outdoor heat exchanger.

Precise temperature control

The VMV 5 units are equipped with double pressure sensors and double electronic expansion valves which enable the automatic refrigerant volume adjustment. With this technology indoor temperature could be controlled by 0,5 °C steps improving the comfort.



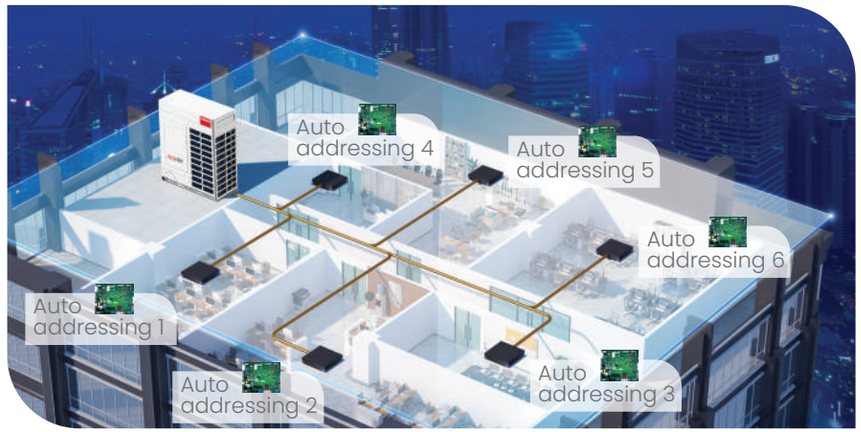
Wide operation temperature range

Special design of the VMV 5H series enables the heating operation at outdoor temperatures down to -27 °C, and coling operation at outdoor temperatures up to 52 °C. Cooling operation outdoor temperature range: -5 °C - 52 °C. Heating operation outdoor temperature range: -27 °C - 21 °C.

Easy installation

Auto addressing indoor units

The outdoor unit can automatically address the indoor units through the module on the PCB. It is more convenient and time saving as there is no need to manually set the addresses on each indoor units separately.



Easy access for maintenance and repair

Rotating design of the electronic control box allows easy access to all internal system components, and saves time during maintenance.

Flexible long piping design

- 1000 m maximum total piping length
- 220 m maximum actual piping length
- 110 m / 90 m maximum height difference between ODU and IDU (ODU higher / IDU higher)
- 30 m maximum height difference between IDU and IDU

* for the total piping length between 300 m and 1000 m, and height difference grater than 50m please contact your supplier

Four-way refrigerant piping connection

Refrigerant pipes can be connected from four different directions which makes the piping installation simpler while saving time and material.

VMV5R

DC INVERTER

Advanced technology

High efficiency

Easy installation

System introduction

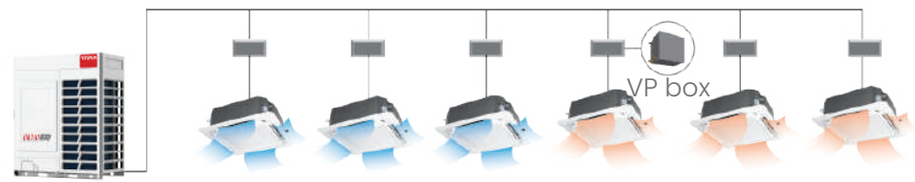
What is VRF heat recovery system?

In the ordinary, two-pipe VRF system, all indoor units within the same system can operate either only in cooling, or only in heating mode. Indoor units in the VMV 5R heat recovery system can simultaneously operate in both cooling, and heating mode using third, heat recovery pipe and valve boxes.

2-pipe system

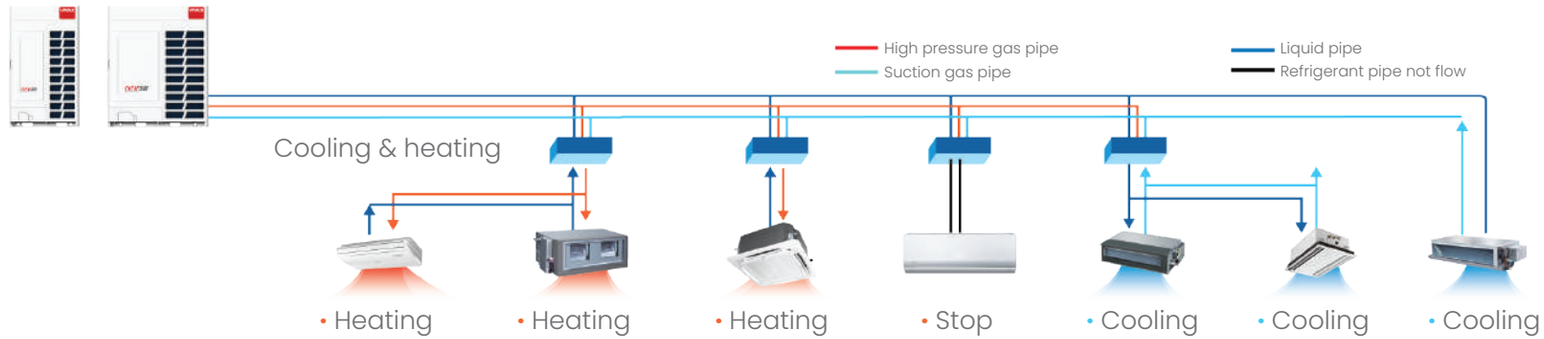
Cooling and heating in two system

3-pipe system



Cooling and heating in two system

Variable operation mode in one system



System introduction

High efficiency

Full DC inverter technology

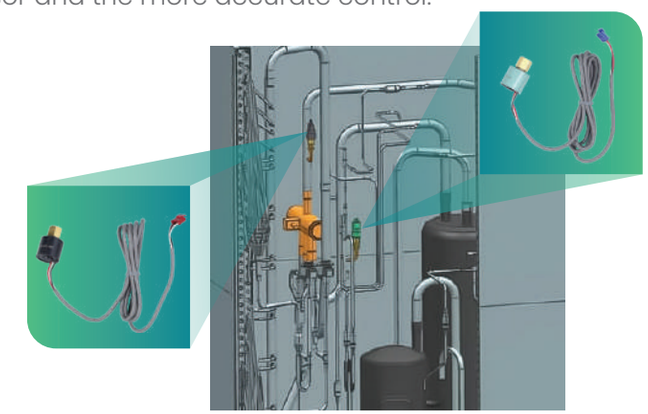
VMV 5R series is equipped with a full DC inverter compressor and a fan with stepless DC inverter motor which increase the overall system efficiency.

Two stage sub-cooling technology

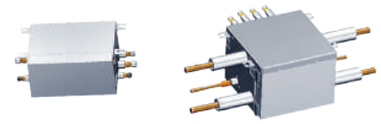
VMV 5R series is equipped with a refrigerant sub-cooler which improves the system capacity and overall performance.

Double pressure sensors

High and low pressure sensors ensure real-time feedback regarding the suction and discharge pressure which enables quicker start of the compressor and the more accurate control.



Easy installation



Valve pipe box overview

Valve pipe box is specially designed for VMV 5R series. Small volume of only 0,02 m^3 (0,047m3 for VPB-04REA4) makes it perfect for installation in restricted spaces. The valve pipe boxes could be connected in series which simplifies the installation and reduce the installation cost.

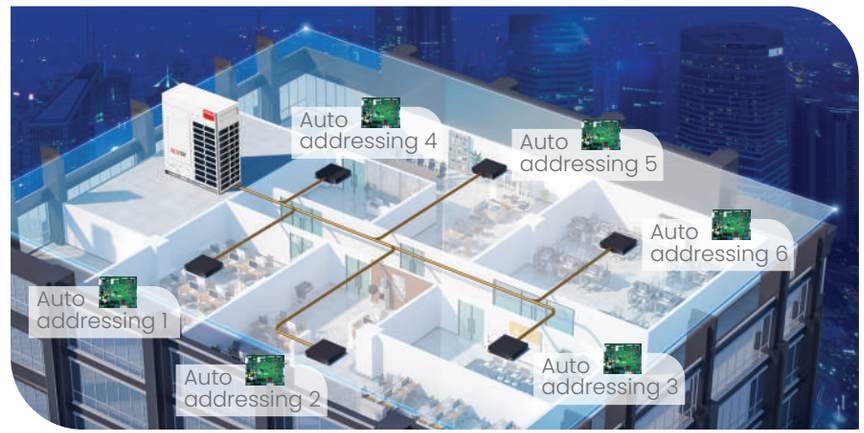
Model name	Max.capacity of indoor (kw)	Power Supply	Max. indoor units	Dimension (mm)
VPB-01REA1	x ≤ 11.2	1/220~240/50/60	5	388 × 200 × 275
VPB-02REA1	11.2 < x ≤ 18	1/220~240/50/60	8	388 × 200 × 275
VPB-03REA1	18 < x ≤ 28	1/220~240/50/60	8	388 × 200 × 275
VPB-04REA4	≤ 45	1/220~240/50/60	20	396 × 290 × 411

Easy access for maintenance and repair

Rotating design of the electronic control box allows easy access to all internal system components, and saves time during maintenance.

Auto addressing indoor units

The outdoor unit can automatically address the indoor units through the module on the PCB. It is more convenient and time saving as there is no need to manually set the addresses on each indoor units separately.



Automatic oil balancing

In the multi module outdoor system the oil level in every module is balanced automatically. In such system there is no need for oil balancing pipes which simplifies the system design and improves reliability.

VMVS
DC INVERTER

Advanced technology

High efficiency

Super comfort

Easy installation

High reliability

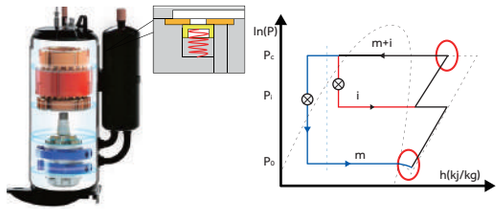
Advanced technology

Advanced sub-cooling technology (4,5,6 HP)

Two stage sub-cooling technology increases the efficiency by 9 %. Sub-cooling up to 30 °C increases the cooling capacity by 46 %.

Higher heating capacity

In low outdoor temperature conditions, system can achieve higher heating capacity thanks to enthalpy injection from the second stage sub-cooling.

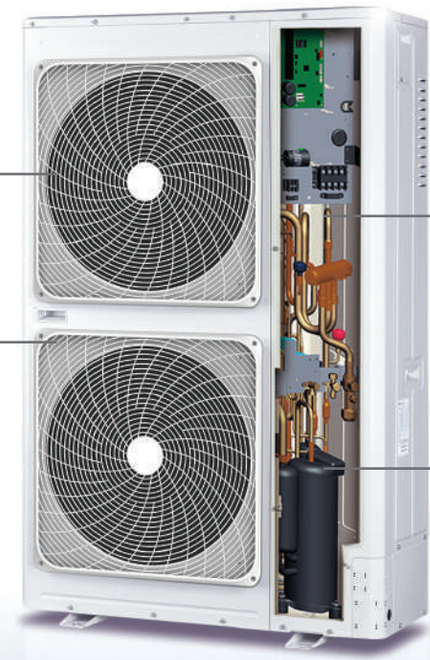


Upgraded configuration, upgraded performance (8 / 10 / 12 HP Side Discharge)

Higher capacity, more flexible application

High efficiency DC fan motor
DC fan motor with stepless inverter control increases efficiency up to 45 % compared with AC fan motor.

Large diameter fan
Large diameter axial fan with a zig-zag design allows a higher air flow with a lower noise level.



Double pressure sensors
High and low pressure sensors ensure real-time feedback regarding the suction and discharge pressure which enables quicker start of the compressor and the more accurate control.

Twin rotary DC inverter compressor
Twin rotary DC inverter compressor increases efficiency while reducing vibration and noise.

High efficiency

High energy efficiency (4 - 6 HP)

DC inverter compressor

- Power input lower by 5 % (5 HP)

550 mm fan with DC motor

- Power input lower by 38 % and air flow higher by 8 %.

Larger heat exchanger

- Heat exchange area increased by 10 %.

Charge valve

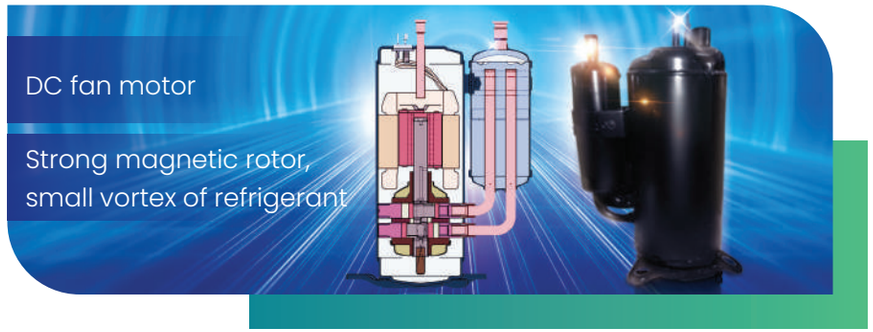
- Bulit-in charge valve enables safer and easier maintenance.

Low standby power

- New PCB program reduce the standby power consumption by 20 %.

DC inverter twin rotary compressor

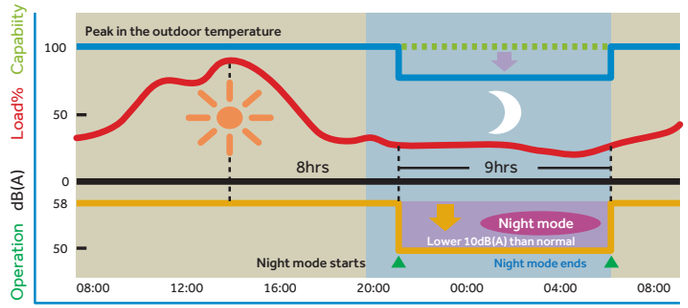
DC inverter twin rotary compressor provides small torque changes and excellent dynamic balance which ensures stable operation with little vibration and low noise. It also allows higher efficiency, particularly when operating at partial load.

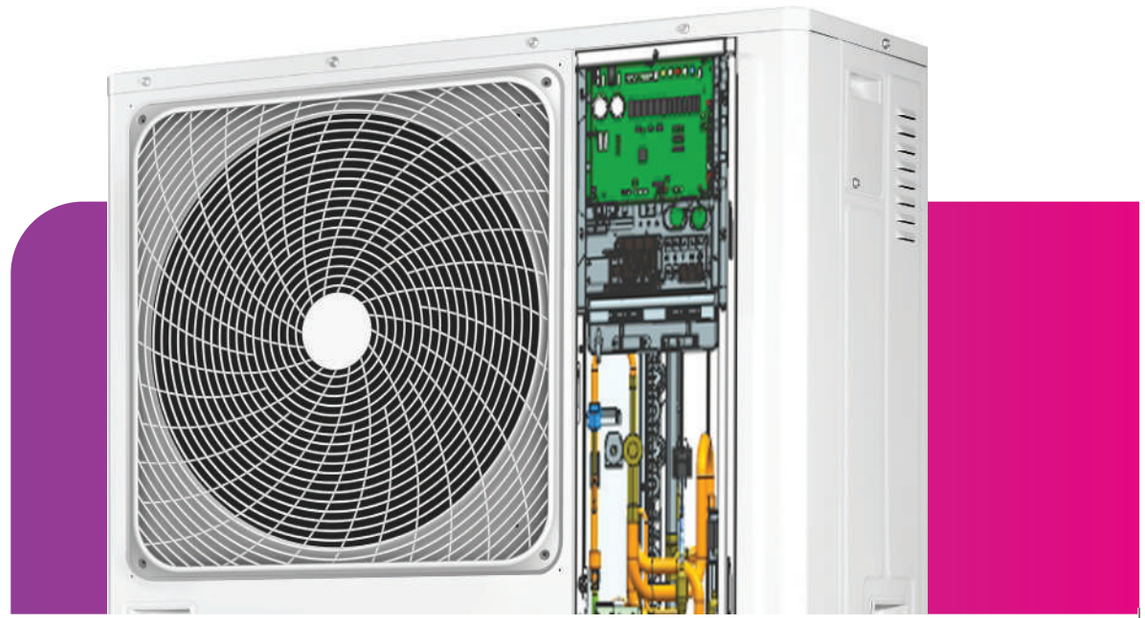


High comfort

Low noise operation

DC inverter compressor provides a smooth operation without frequent starting and stopping, ensuring the lower noise level. The unit also has a large diameter fan and a DC fan motor which also have a positive effects on lowering the noise level. Additionally it is possible to set a night mode function which reduces the noise up to 45 dB(A).





Easy installation

Double side “4 ” handles
Easy to carry
“888” test panel
All running data & error code can be checked from „888“ screen, which is easy for installers.
“Four-way” pipe connection
4-way (front,back, left & right) pipe connection, easy to design and install.

Flexible long piping design

- 300 m maximum total piping length.
- 175 m maximum single piping length.
- 135 m maximum piping length between outdoor and the first branch.
- 40 m maximum piping length from the first branch to the farthest unit.
- 50 m / 40 m maximum height difference between ODU and IDU (ODU higher / IDU higher).
- 15 m maximum height difference between IDU and IDU.

Compact side discharge design

The unit covers an area of only 0,42 m² and there is no need for the additional air discharge hood as is the case with the top discharge units. Its design makes it suitable for installation at sites with limited installation space.

43 % floor area reduced

172 mm height reduced

Separate refrigerant charging valve

The unit is equipped with the separate refrigerant charging valve which enables easier and safer maintenance.

Parameter display panel

The parameter display is located on the side of the unit. Parameters can be read directly by opening the display cover without the need to dismantle the chassis of the unit.

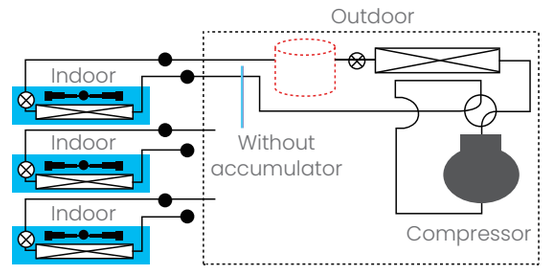
High reliability

Automatic refrigerant recovery technology

Automatic refrigerant recovery can be set through dip switches on the outdoor units PCB. When activated this function recovers the refrigerant in the pipeline and indoor units and returns it to the outdoor unit which is reducing maintenance time and cost.

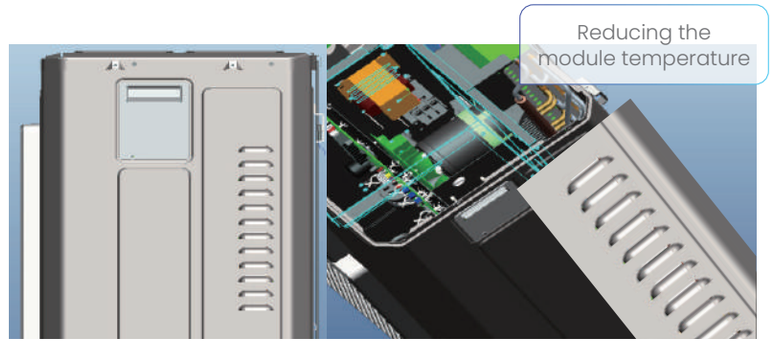
Refrigerant control technology

Refrigerant control technology without the high pressure accumulator increases the system efficiency and reduces the refrigerant volume.



Air inlet grille design

Air inlet grille is located on the top right side of the chassis of outdoor unit. Its design allows easy entrance of air for cooling the control module while keeping the dust out of the unit.



Double pressure sensors

High and low pressure sensors ensure real-time feedback regarding the suction and discharge pressure which enables quicker start of the compressor and the more accurate control.

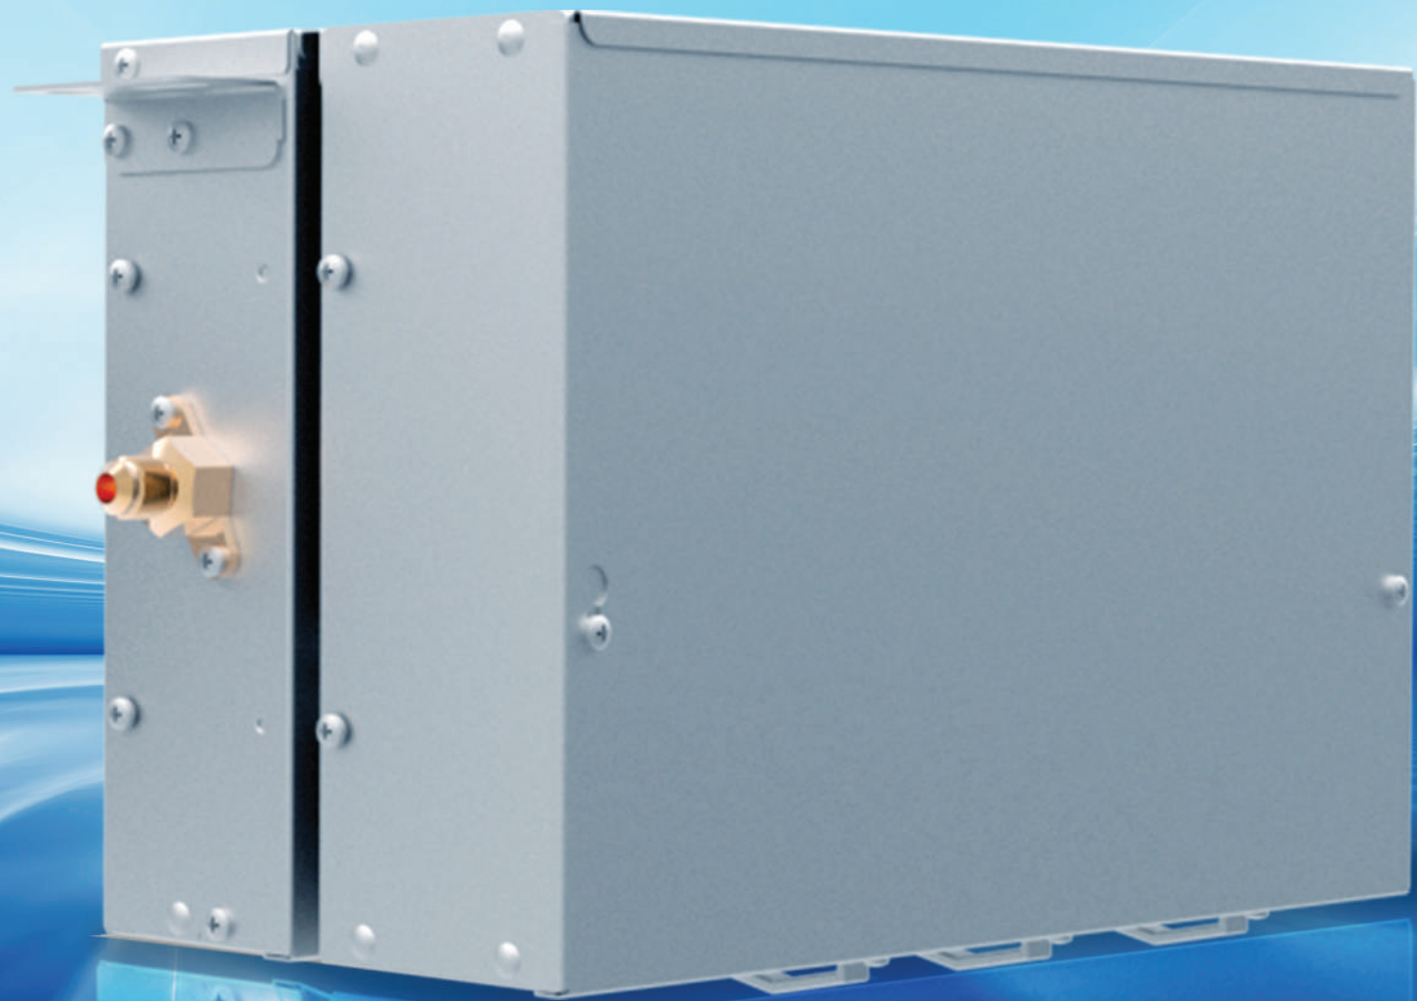
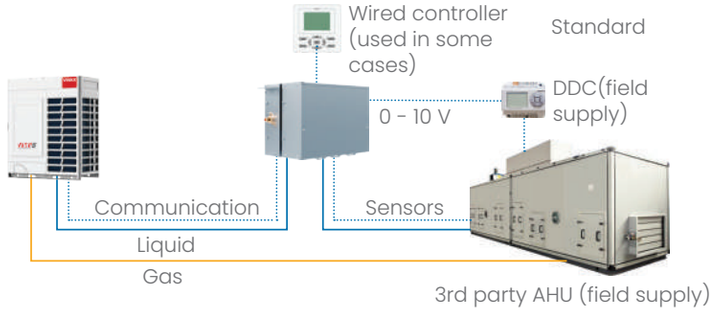
AHU KIT



System introduction

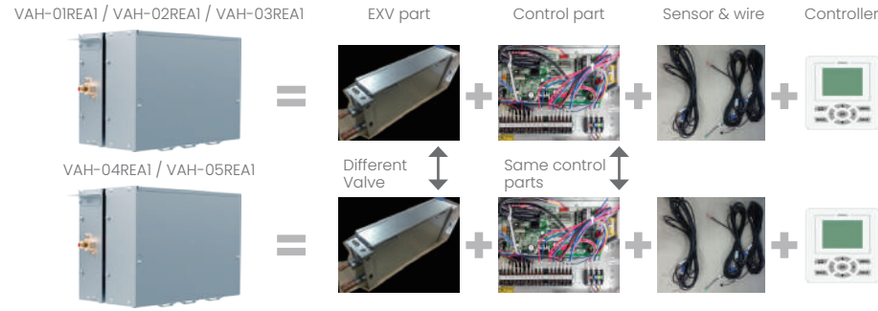
System introduction

VMV AHU kit provides heating and cooling solutions for the third-party air handling units equipped with a DX heat exchanger.



Ahu kit configuration

AHU kit consists of electric expansion valve, control box, temperature sensors and a wired controller.



System line-up

AHU kit provides a wide range of capacity solutions of the connected air handling units and could be used as a separate solution, or could be installed together with other Vivax VRF indoor units.

DX AHU² Connection kit					Special design for VMV 5 , VMV S

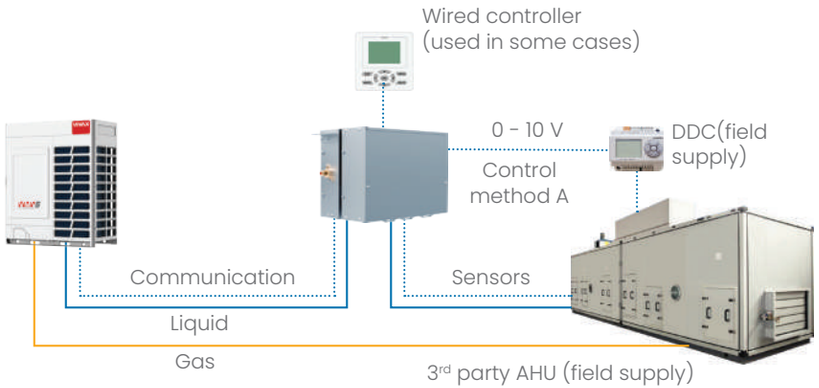
AHU & VMV indoor			

Control solutions

AHU kit has a possibility of using four different control methods which allows flexibility and possibility to integrate in various systems.

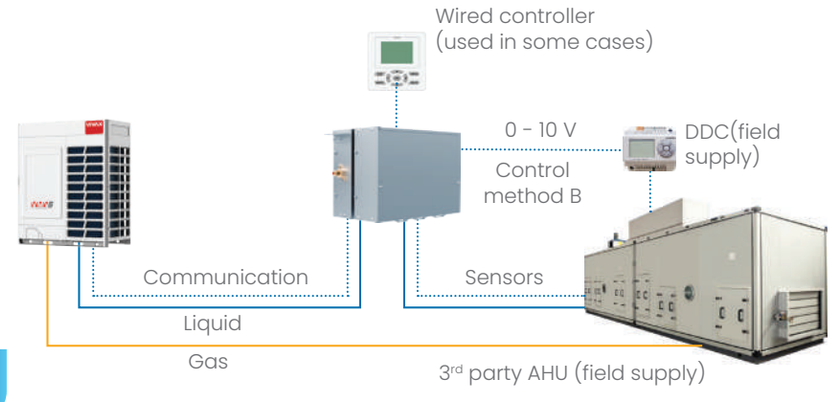
Control method A

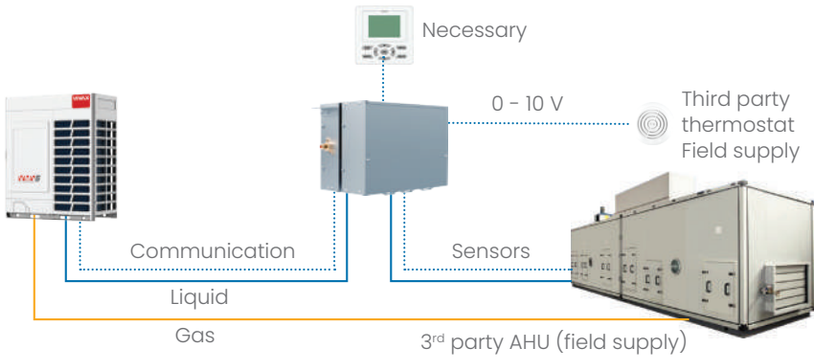
- 0 - 10 V signal output from DDC
- AHU kit receives 0 - 10 V signal to adjust the ODU capacity



Control method B

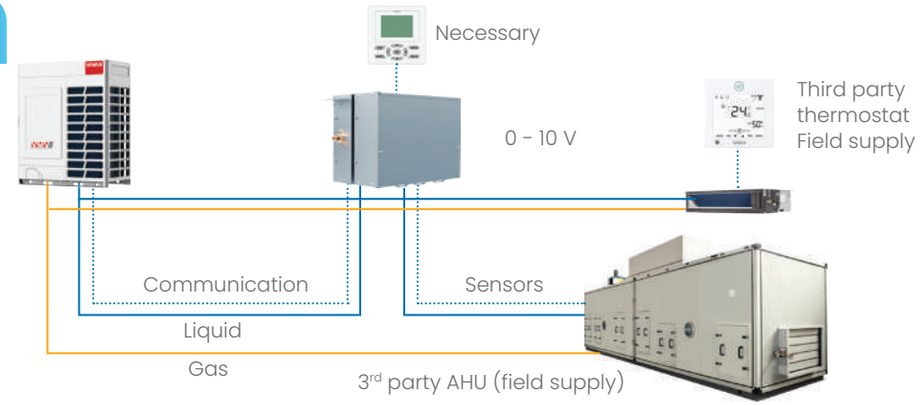
- Control temperature via DDC
- 0-10 V signal output from DDC
- AHU kit receives 0-10 V signal to adjust set-point temperature





Control method C (Special application)

- Without DDC
- VIVAX wired controller is necessary for initial set-up but not required for operation
- Third party thermostat provides ON/Off signal to AHU kit when the set point temperature reaches
- Applicable for some cases with constant cooling or heating demand and insensitive comfort demands

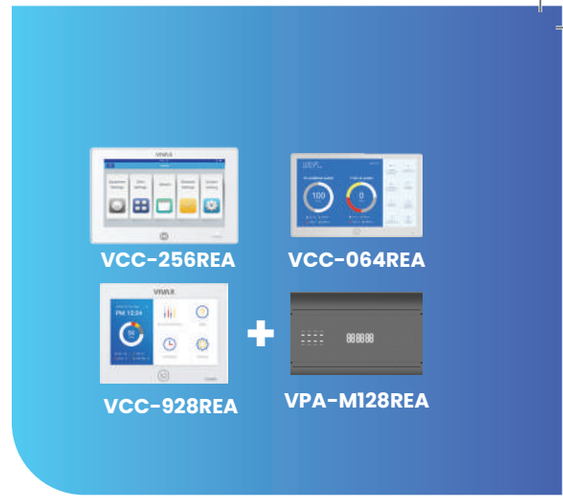


Control method D

- Similar to original AHU kit V 1.0
- Control AHU as VRF indoor units
- Return / Room temperature controle
- VIVAX wired controller is used to operate
- Control method for combination VRF indoor units and 3rd party AHU system

Central control and BMS

AHU kit can be connected to a central controller and the BMS system. For the control methods A, B, and C only monitoring function is available, while the control method D allows both monitoring and control of the AHU system.



Unit structure

Features

Available capacities of connected AHU are in range between 3,5 kW and 73 kW when connected with a single AHU kit. When connected with a combination of more AHU kits the AHU capacity can be up to 292 kW. System could receive a 0-10 V control signal input. Only liquid pipe connection.

VMV AHU Combination method

Capacity	Combination model
3 ≤ x ≤ 7 kW	VAH-01REA1
7 < x ≤ 14 kW	VAH-02REA1
14 < x ≤ 28 kW	VAH-03REA1
28 < x ≤ 56 kW	VAH-04REA1
56 < x ≤ 73 kW	VAH-05REA1
73 < x ≤ 112 kW	VAH-04REA1 + VAH-04REA1
112 < x ≤ 146 kW	VAH-05REA1 + VAH-05REA1
146 < x ≤ 168 kW	VAH-04REA1 + VAH-04REA1 + VAH-04REA1
168 < x ≤ 219 kW	VAH-05REA1 + VAH-05REA1 + VAH-05REA1
219 < x ≤ 224 kW	VAH-04REA1 + VAH-04REA1 + VAH-04REA1 + VAH-04REA1
224 < x ≤ 292 kW	VAH-05REA1 + VAH-05REA1 + VAH-05REA1 + VAH-05REA1
Note: The above is the combination method for single heat exchanger, when multiple heat exchangers need to be matched according to the capacity of each heat exchanger

VMV Indoor Units

Cassette

Convertible

Duct

Built-in floor standing

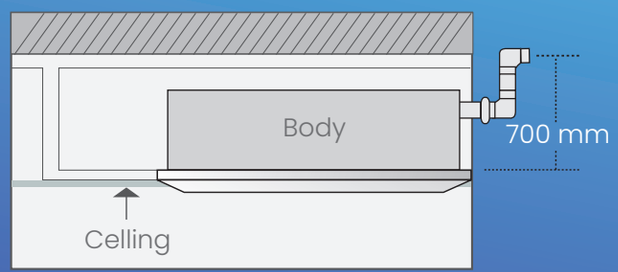
Console

High wall

1-Way Cassette

Built-in drain pump

Unit is equipped with drain pump with built-in float switch, and is capable to deliver the water 700 mm high.



Suitable for corner installation for comfortable and uniform air supply

Compact design, full use of corner space installation, such as small meeting rooms, corridorsetc.; The indoor unit is built in the ceiling. Suitable for long and narrow rooms, to ensure the uniform distribution of air flow and room temperature.

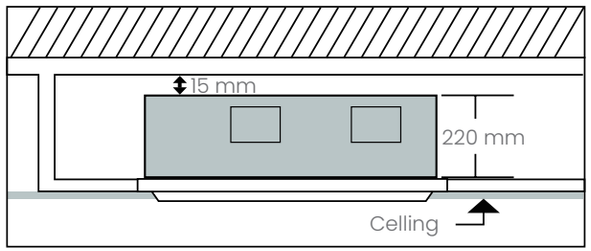
High comfort with wide angle air supply

The unit has high efficient DC fan motor and is equipped with a horizontal and vertical swing motor which allows a wide angle of supply air direction, hence improving the indoor comfort.

2-Way Cassette

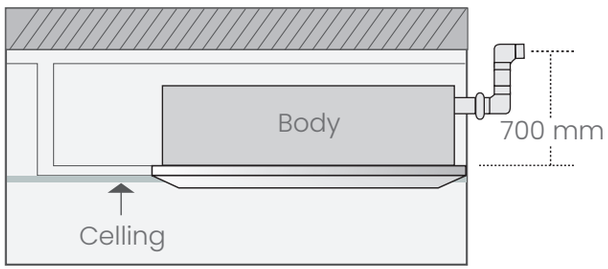
Easy installation

Height of only 220 mm and low weight of the unit provides easy installation in locations with limited installation space.



Built-in drain pump

Unit is equipped with drain pump with built-in float switch, and is capable to deliver the water 750 mm high.



Special design for preventing fouling on the ceiling

The unit has special design of the air outlet louver which redirects the cold air to not flow near the ceiling and prevents the fouling.

Round Way Cassette

Flexible air outlet in all directions

Unit has four air outlet louvers with 6 adjustable positions and it is possible to independently control each. Unit has round-way air outlet with no blind spot.

Built-in drain pump

Unit is equipped with drain pump with built-in float switch, and is capable to deliver the water 700 mm high.

Hidden display and self diagnostic

Unit has a hidden display on the panel which can show an error codes for easier maintenance.

Slim design

Units height of only 183 makes it perfect for installation on places with limited installation space.

Low noise and energy efficient operation

Units are equipped with a DC fan motor, a fan with a aerodynamic design and a large air inlet grille which reduce noise level and improves the energy efficiency.

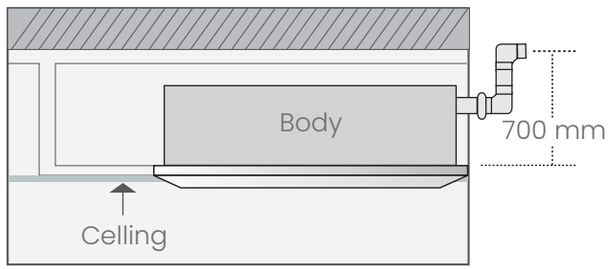
Compact Four Way Cassette

Compact design

VIVAX Compaxt Four Way Cassette has dimensions of 570 x 570 mm, which makes it ideal for easy installation in existing dropped ceiling.

Built-in drain pump

Unit is equipped with drain pump with built-in float switch, and is capable to deliver the water 700 mm high.



Low noise and energy efficient operation

Units are equipped with a DC fan motor, a fan with a aerodynamic design and a large air inlet grille which reduce noise level and improves the energy efficiency.

Flexible air outlet in all directions

Unit has four air outlet louvers with 6 adjustable positions and it is possible to independently control each.

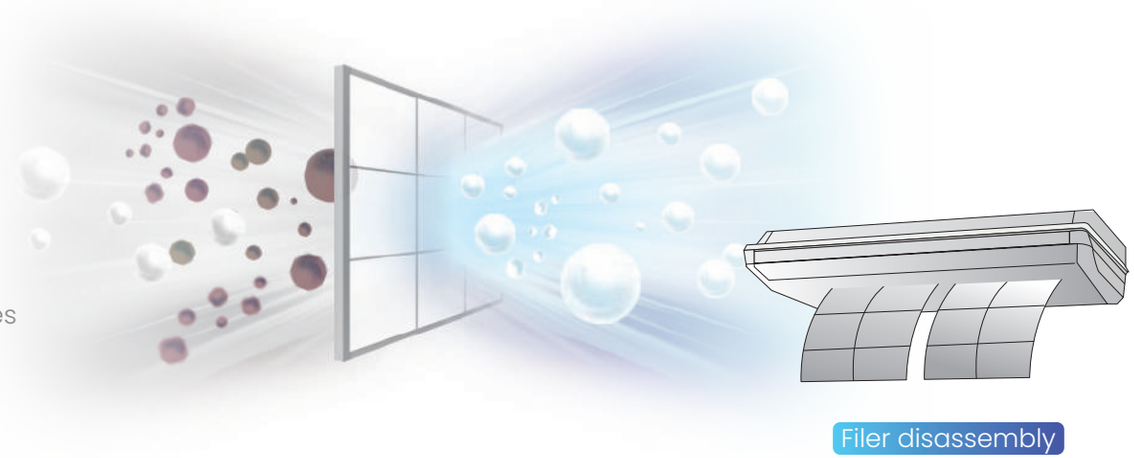
Fresh air inlet

The unit is equipped with fresh air inlet which can improve indoor air quality.

Floor - Ceiling

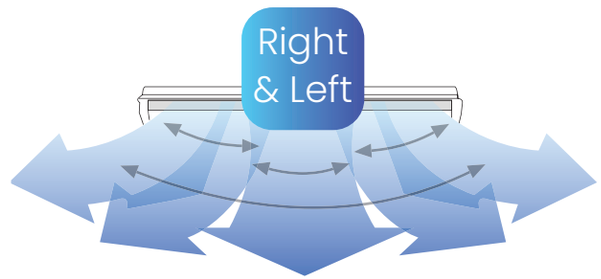
Air filtration

The unit is equipped with a high efficiency air filter which removes dust and improves the air quality. Filter can be easily removed which simplifies the maintenance.

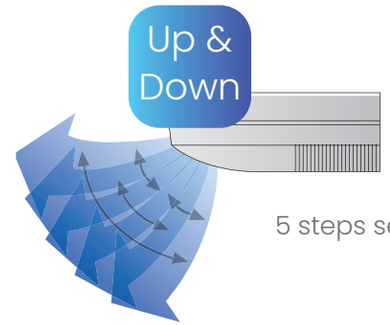


Flexible air distribution

Unit has a horizontal and vertical automatic, five step, swing control which allows flexible air distribution.



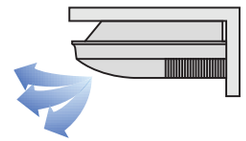
5 steps selectable



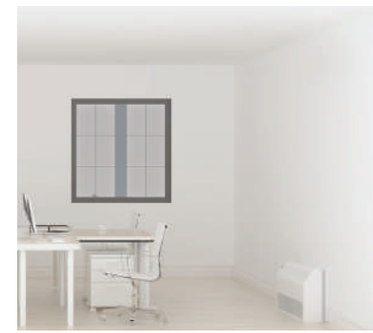
5 steps selectable

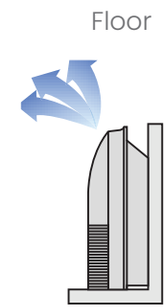
Flexible installation

Unit could be installed either on the floor or in the ceiling.



Ceilling





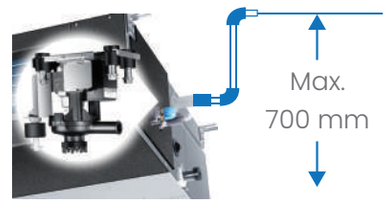
Floor

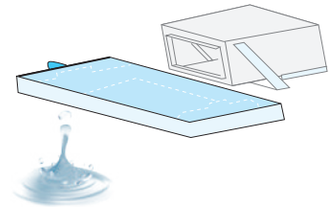
Slim Duct

Slim design
Height of only 185 mm allows the installation in the locations with a limited available ceiling height.

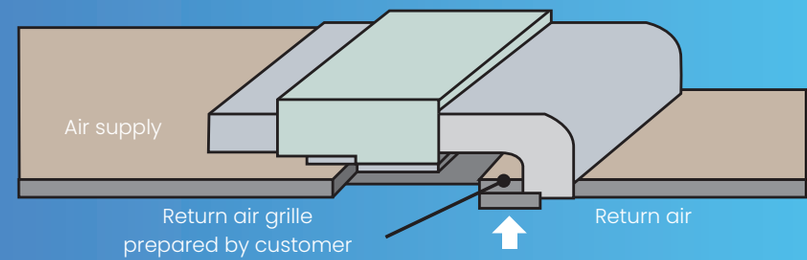
Low noise operation
DC fan motor and air inlet and outlet design contributes to the lower noise level during operation.

Built-in drain pump
Unit is equipped with drain pump with built-in float switch, and is capable to deliver the water 700 mm high.

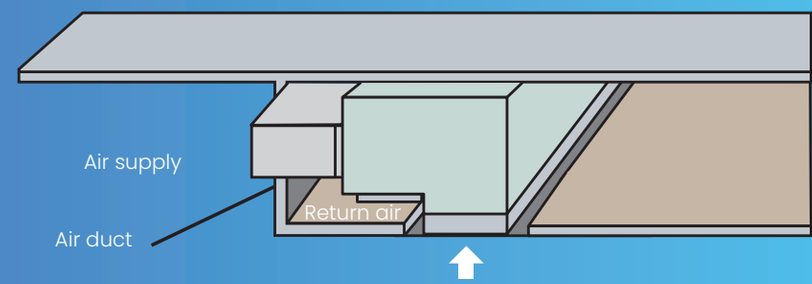




Flexible return air installation
Unit has a air return connection from the rear side, but when there is a lack of the installation space air return could also be connected from the bottom.



Air return mode from rear (factory standard air return mode)



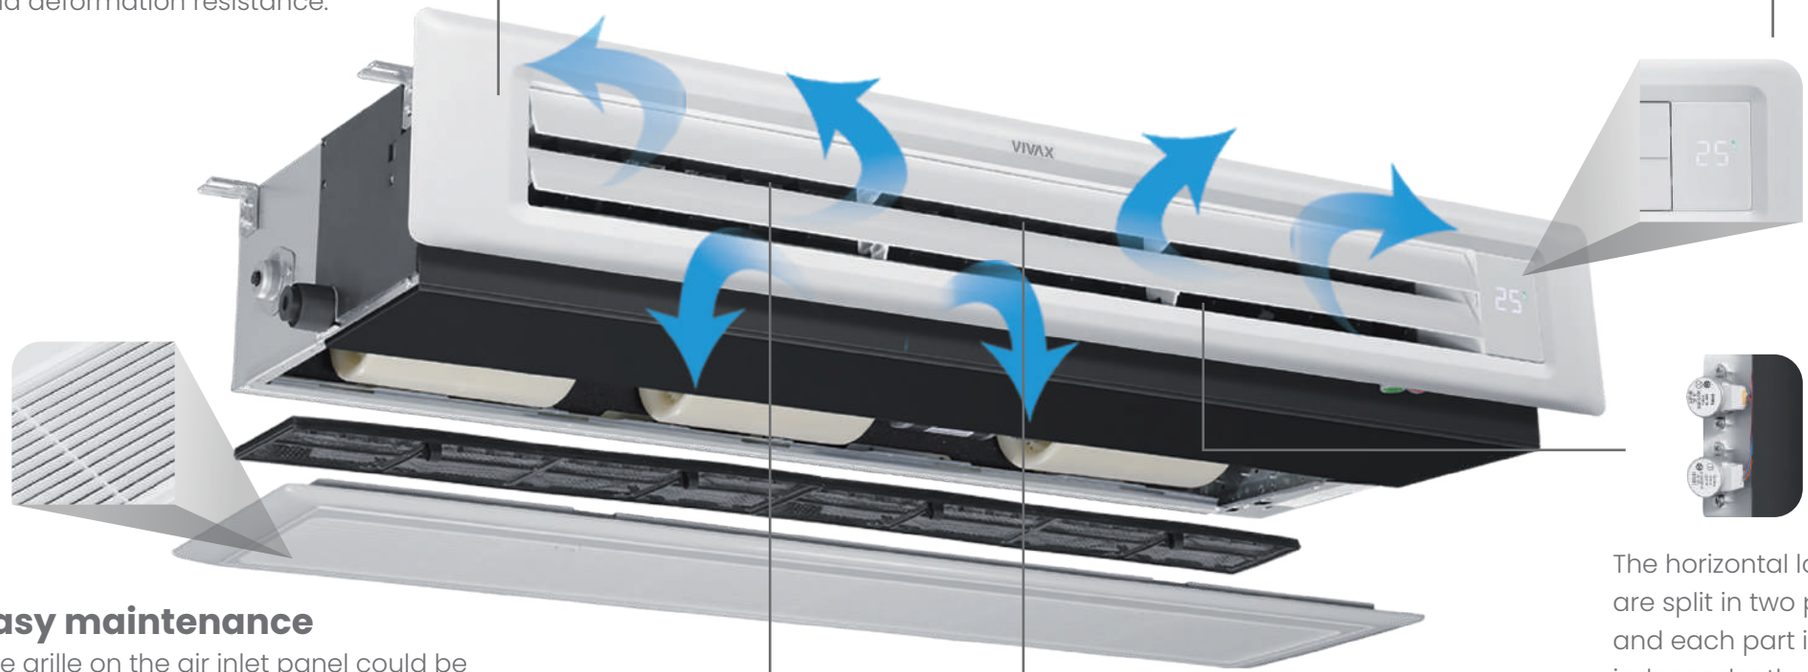
Return air from the bottom

High quality material

Air intake and outlet panel is made from high quality plastic material (PC-ABS) which has high heat, impact and deformation resistance.

Hidden display

The outlet air panel has a hidden display which shows temperature, and has a red color while operating in heating mode and green color in the cooling mode.



The horizontal louvers are split in two parts and each part is independently driven by one electric motor.

The vertical louvers are driven by a electric motor.

Easy maintenance

The grille on the air inlet panel could be easily removed by pulling the buckle when cleaning is needed.

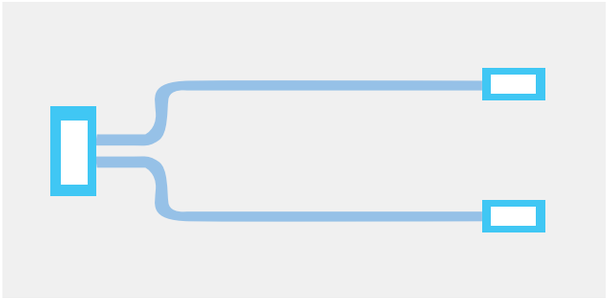
3D air supply

Louvers in the outlet air panel could be controlled in vertical and horizontal directions providing a comfortable air supply.

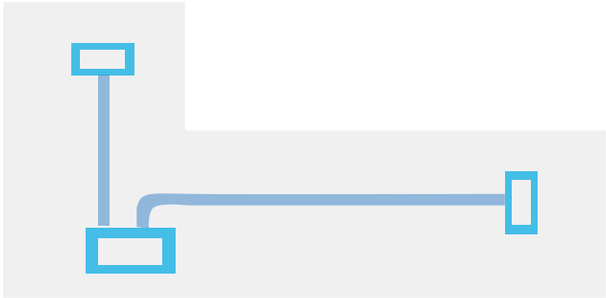
High ESP Duct

Variable duct connection

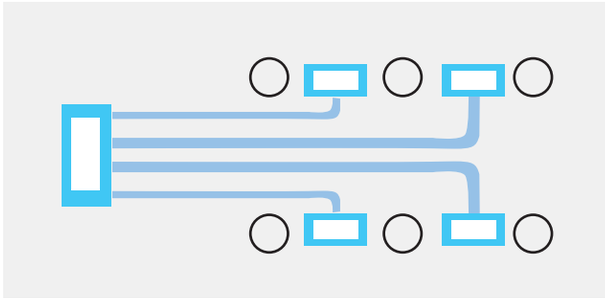
High available static pressure allows connection on the multiple ducts.



The long room



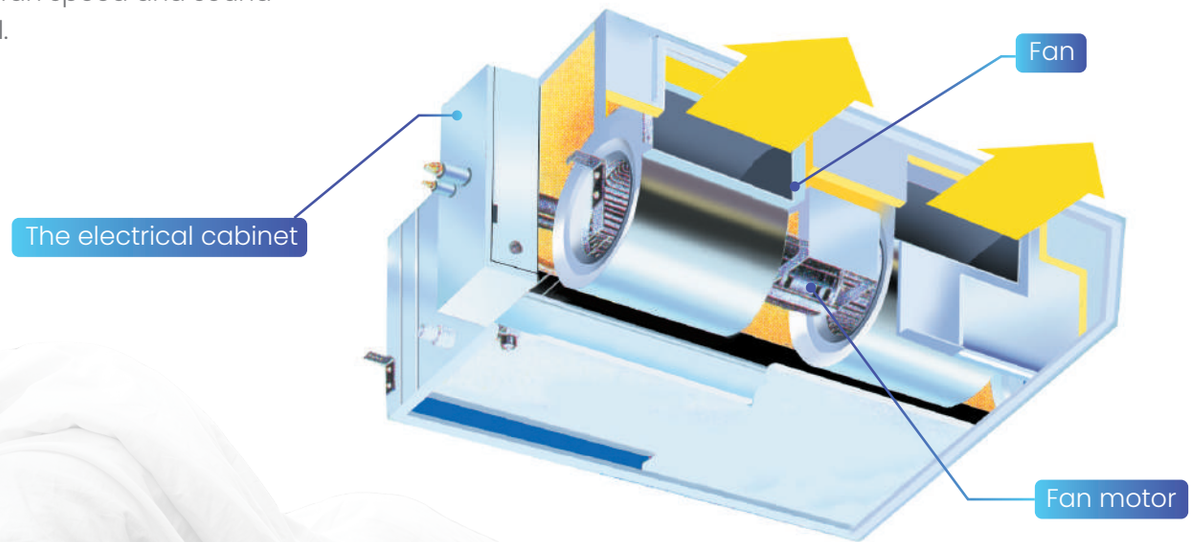
L room



A room with ceiling fixtures

Low noise design

Combination of the DC fan motor, 5 available fan speed and sound insulation allows operation at a low noise level.



Built in floor standing

Slim design for concealed installations

Thanks to its slim design and depth of only 221 mm, the VIVAX Built in floor standing unit can be easily installed in decorative housings.

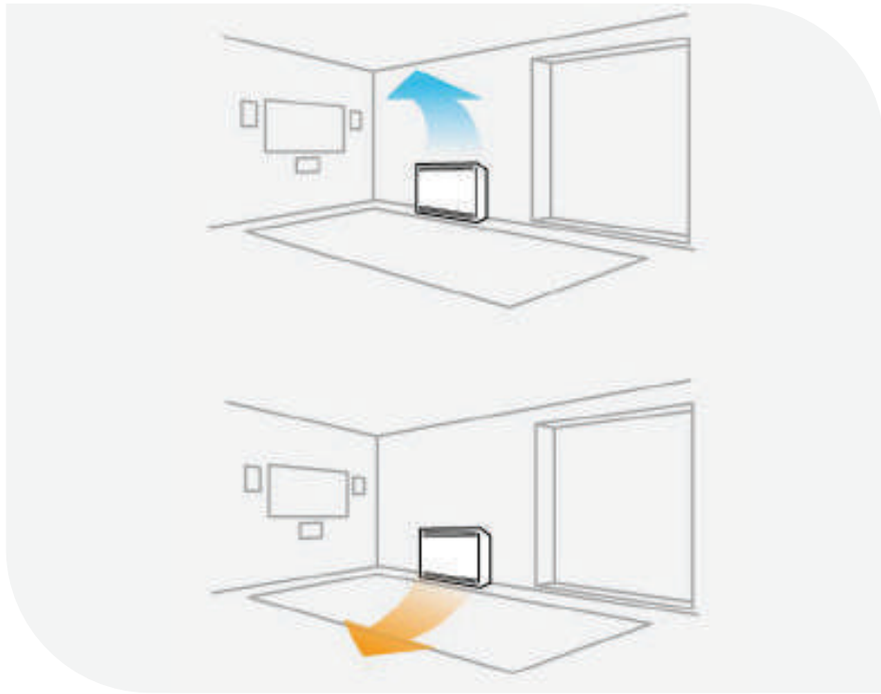
Available static pressure of 30 Pa

Built in floor standing units are equipped with a fan that ensures a static pressure of up to 30 Pa. This allows unit to be installed inside decorative housings.

Console

Double air exhaust

Console units have air exhaust on two sides for even more efficient heating and cooling. Deflectors intelligently direct cold air up and hot air down, to set the perfect temperature quickly and efficiently without blowing air directly at the people in the room.



Compact design

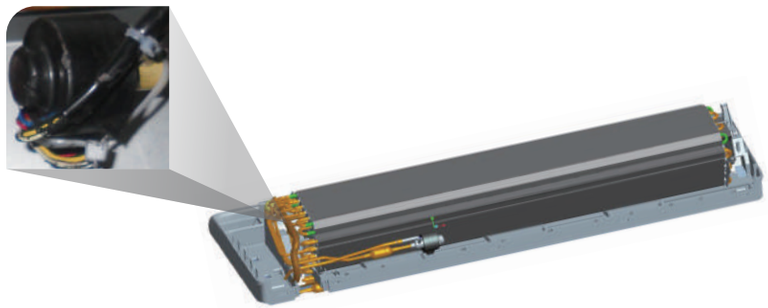
Console units have compact design which allows easy installation on the floor or against the wall even if the avaliable installation space is limited.

High Wall

Built-in electronic expansion valve

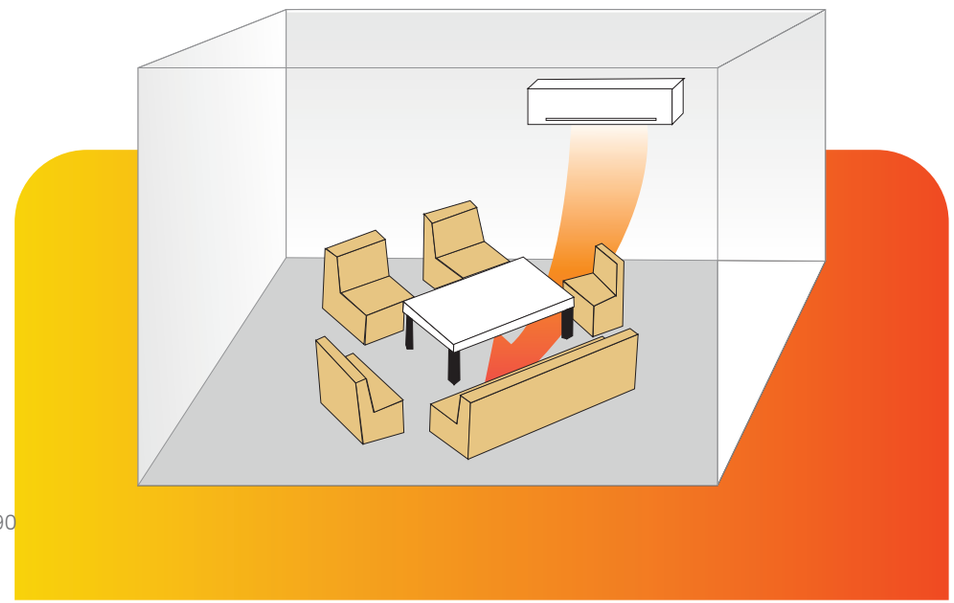
The unit has a built-in electronic expansion valve which allows a simpler installation. (version with external expansion valve is also available).

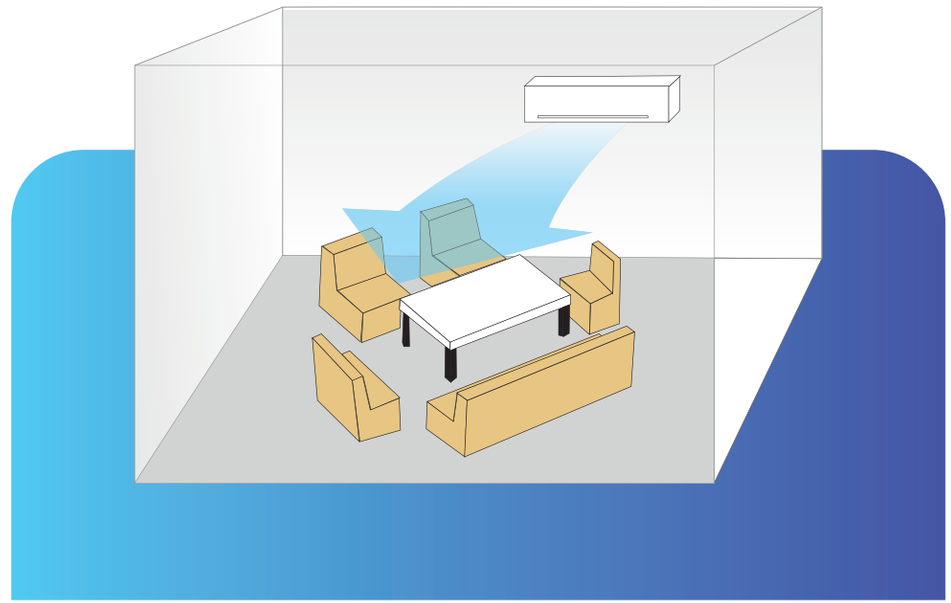
Electronic expansion valve built in



Flexible air supply control

DC fan motor, and multiple available louver positions allows flexible air supply control. When working in cooling mode air supply is automatically directed up, and during operation in heating mode air is blown down to ensure maximum comfort





Hydro box

Ultimate comfort

The hydro unit has a heating capacity of up to 28 kW per module which can be used in conbination for bigger system demand. Water temperature range is from 5 °C to 50 °C and provides comfort to users.

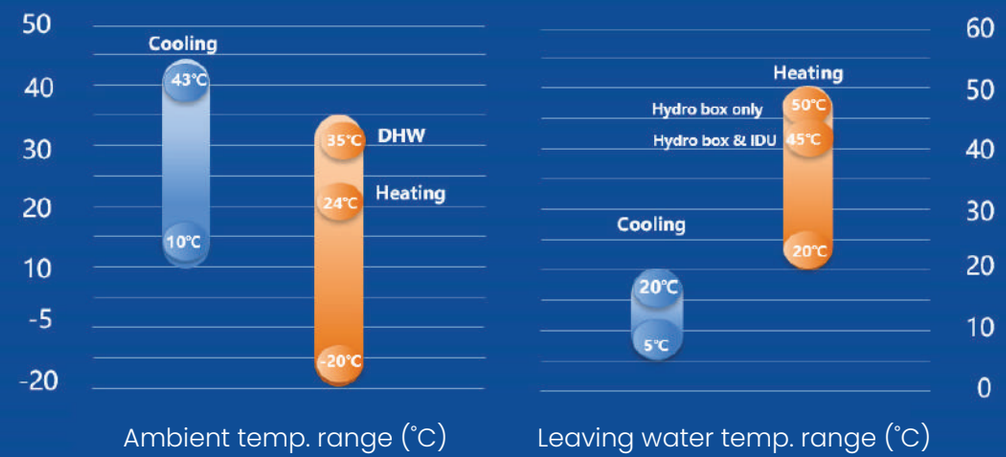
Low operating cost

By using free renewable energy from the outside air as heat source, it is more energy efficient than oil and gas devices.

Intelligent control

- Smart grid ready
- Easy 3rd party BMS solution
- Scheduling programs
- Anti-freeze function
- 5-inch colorful controller on the front panel and an optional wired controller

Operation temperature range



Ambient temp. range (˚C)

Leaving water temp. range (˚C)

VMV Indoor ventilation

Fresh air

Perfect solution for heating, cooling and fresh air supply

VIVAX Fresh air units are ideal solution for supplying clean and fresh air to spaces where there is an increased concentration of particles such as dust or soot that interfere with the operation of classic air conditioners. These devices are suitable for installation in, for example, bakeries, restaurant kitchens and other similar facilities.

Available static pressure up to 350 Pa

VIVAX Fresh air units are equipped with a DC fan that ensures a static pressure of up to 350 Pa. This allows the unit to be installed on long ventilation duct systems.

Control system

Individual Controller

The individual control system has a variety of wired and wireless controllers which enable you easy and intelligent control of your air conditioners. You can choose the one which best suits for your air conditioning management.

VCR-01CREA		• On/Off, Operation Mode, Fan speed, Temperature setting, Swing • Turbo and Quiet • Individual louver control for Round Flow cassette and Compact four way cassette • Clock & Timer • Health function • Self-Clean • Backlight • Convenient to operate most functions through one button
VCR-02OREA		• On/Off, Operation Mode, Fan speed, Temperature setting, Swing • Turbo and quiet • Individual louver control for Round Flow cassette and Compact four way cassette • Self-Clean • Timer • Health function • Backlight
VCW-01REA		• On/Off, Mode, Fan speed, Temperature setting, Swing • Individual & Group control (Max.16 indoor units) • Simple and Smart design, 86 x 86 x 13.05 mm • Touch button with back light • Timer/ Clock • Individual flap control for round way cassette and compact cassette • Built-in infrared signal receiver for duct units • Self-cleaning function • Built-in humidity sensor and humidity display
VCW-03DREA		• Individual & group control (max. 16 indoor units controllable) • Compact design 86 x 86mm • Touch screen • Black and tempered glass body with highlight LED icon display • Basic function: on/off, mode, swing, dry, auto • Built-in infrared signal receiver for infrared remote control
VCW-02CREA		• Colorful screen • On / off, mode, fan speed, temperature setting, swing • Individual & group control (max 16 indoor units) • Fahrenheit / celsius option; sensitivity ± 0.5 °C (± 1 °F) • Weekly timer • Individual louver control for Compact four way cassette and Round flow cassette • Static pressure setting
VRR-01REA		• Infrared signal receiver • Remote control of duct type indoor unit • Model selection depends on the duct indoor unit
VWF-C064REA (Central Control WIFI Module)		• Individual / Central remote control by APP • Max.64 IDUs controllable for single wifi module (Max. 256 for combinations) • Remote monitoring and control: on / off, temp, operation mode, fan speeds • Weekly Scheduling • Error alarm and error history • Convenient management authority sharing without repeating to pair with units • Connecting to 5-inch central controller (VCC-064REA); (VMV 5 and VPA-HM064REA gateway can connect directly.)

Centralized Controller

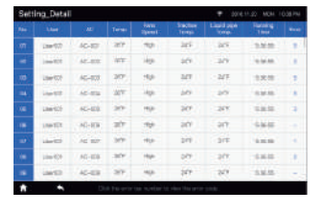
VCC-064REA

- Individual control, central control (max. 64 indoor units)
- 5-inch TFT LCD touch screen with back light
- Weekly timer
- Indoor units' information editable
- Error history
- VMV 5, VMV 5H, and VMV 5R outdoor units can connect directly, other VMV systems need VPA-HM064REA

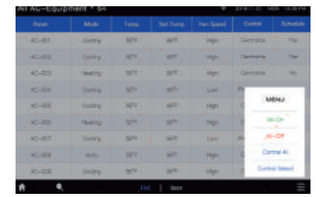
Monitoring up to 64 indoor units and monitoring the state of all IDU display IDU number, ON / OFF, Fault IDU number

Set schedule for unit, group,all time control could be add, change, delete,unit control, group control , all ON / OFF

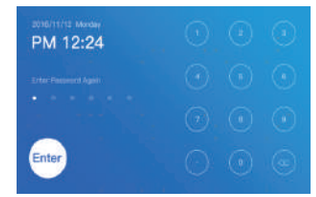
Turn ON / OFF the DST DST schedule time setting DST compensation setting



Display the detailed information check the name, number, temperature, running time and fault code

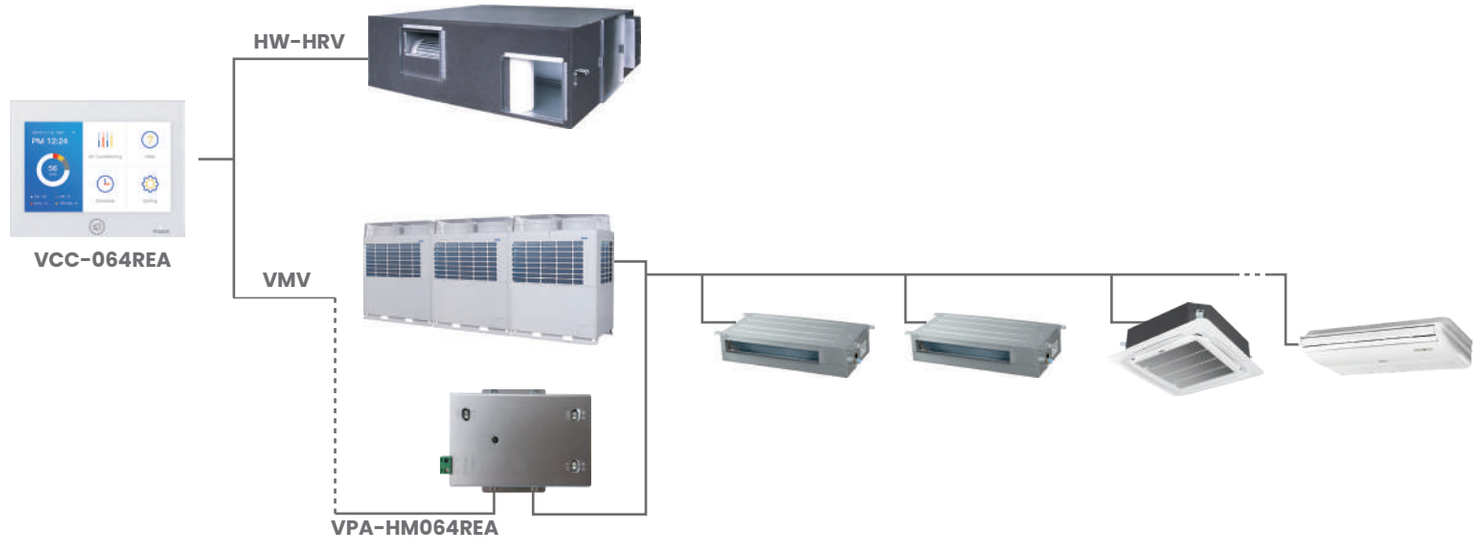


Interface display mode choice: list or icon All on, all off, control all, control select



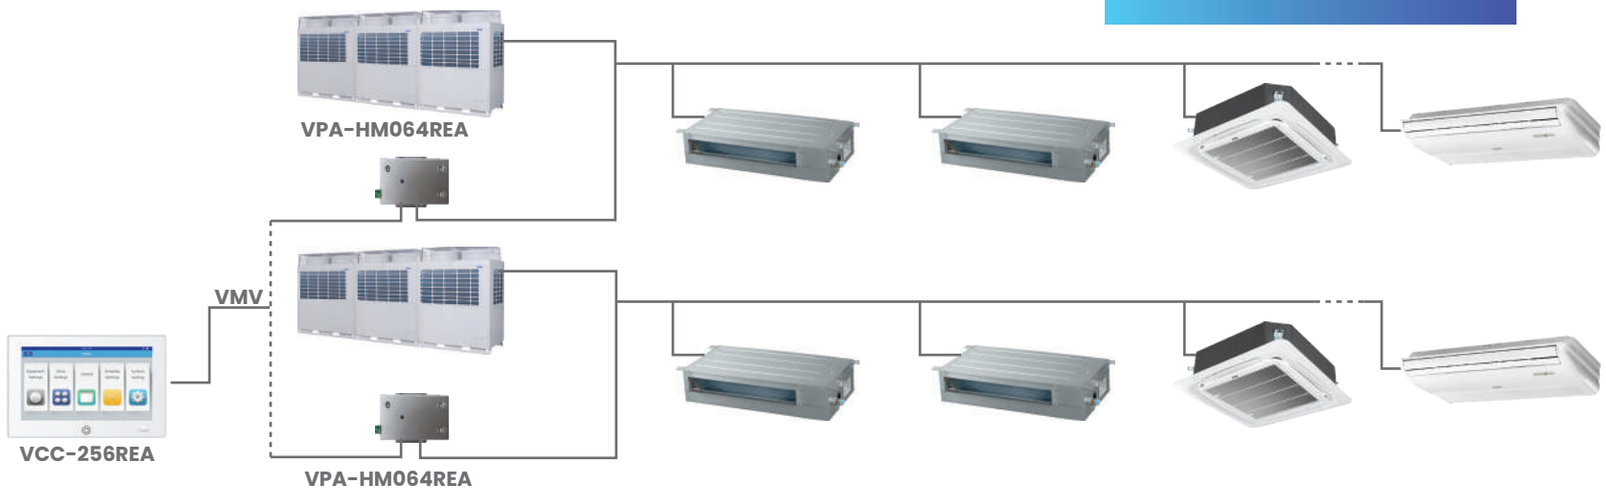
Setting password according to user demand

VCC-064REA System



VCC-256REA

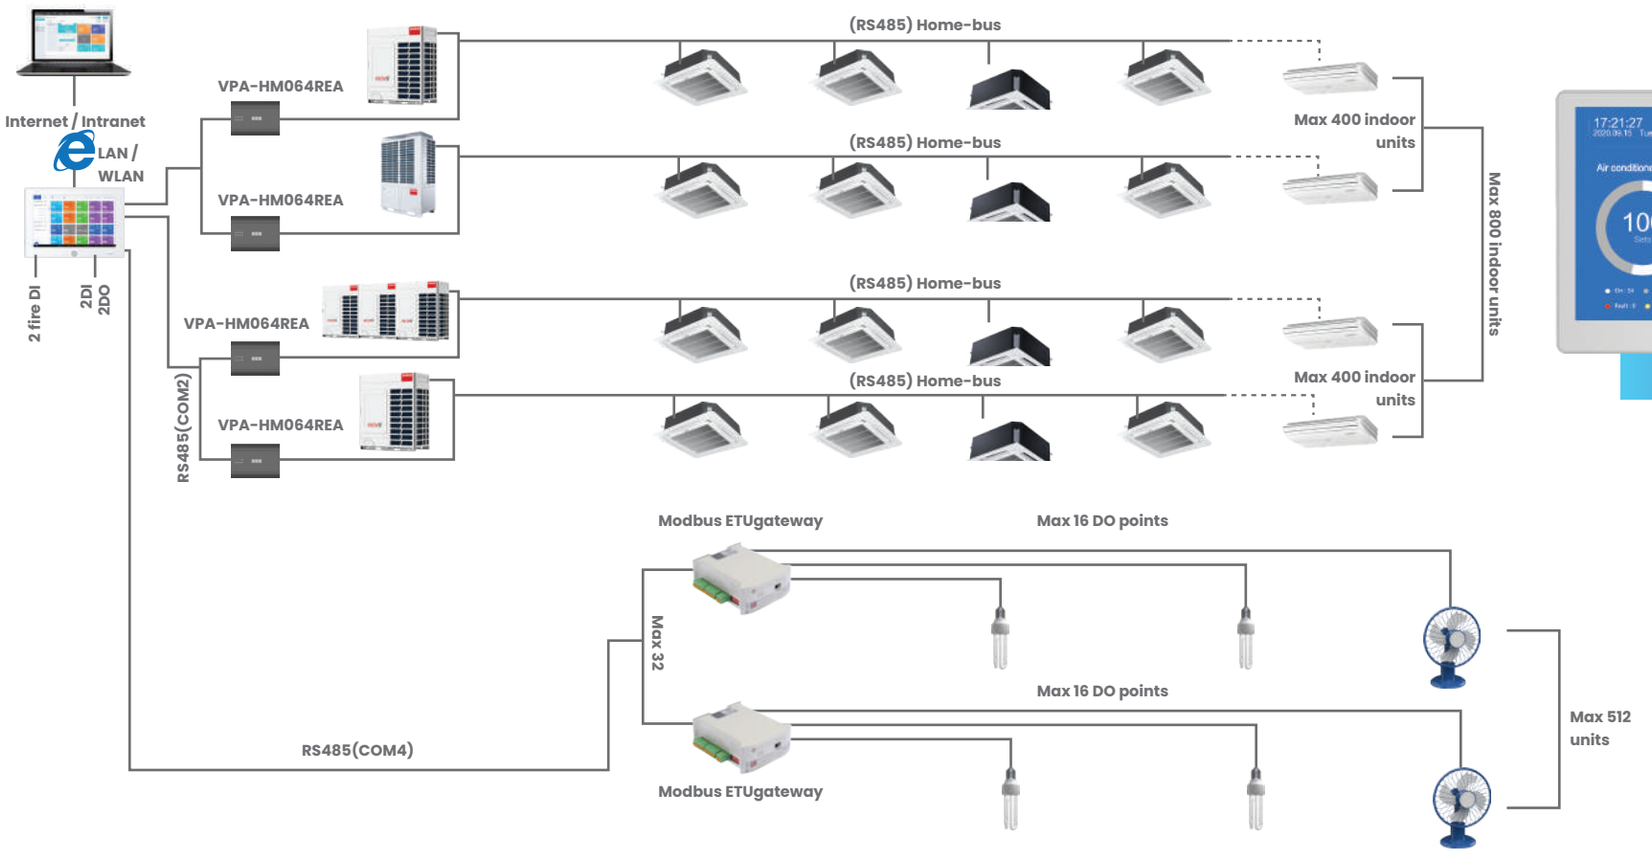
- Individual control, group control & central control (Max. 256 indoor units)
- 7-inch TFT LCD touch screen with back light
- Weekly timer
- Indoor units' information editable
- Error display
- VMV 5, VMV 5H, and VMV 5R outdoor units can connect directly, other VMV systems need VPA-HM064REA



VCC-928REA

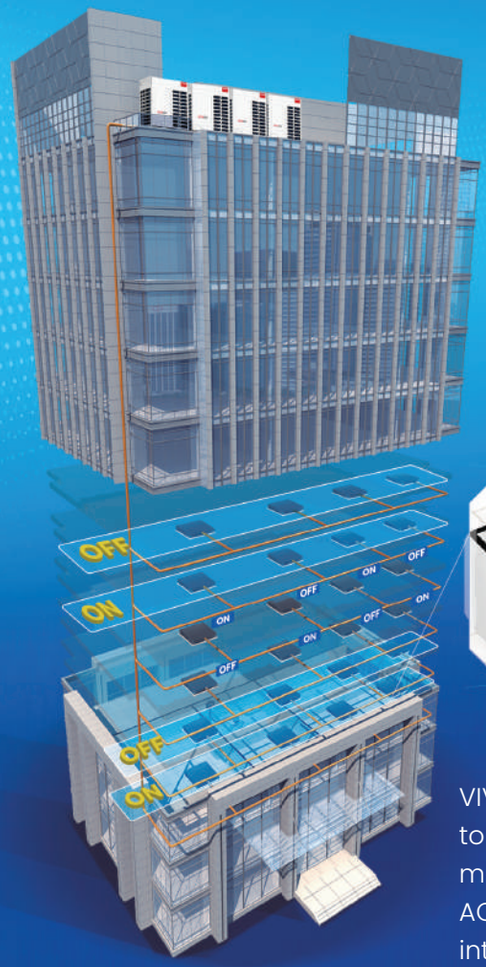
- 12.5-inch TFT LCD touch screen
- Max 800 indoor units could be connected
- Floor plan layout view
- Web Access and Email Alarm
- Weekly Schedule and Special day setting
- Integrate 3rd party devices like fire alarm, lighting with VIVAX indoor units
- All VMV system requires the new gateway VPA-M128REA (one system requires one gateway)
- All systems require the VPA-M128REA gateway (one per system).
- Total electricity consumption display
- Data curve
- Electricity consumption distribution for Tenant billing
- Multi Language

VCC-928REA System



BMS Solution

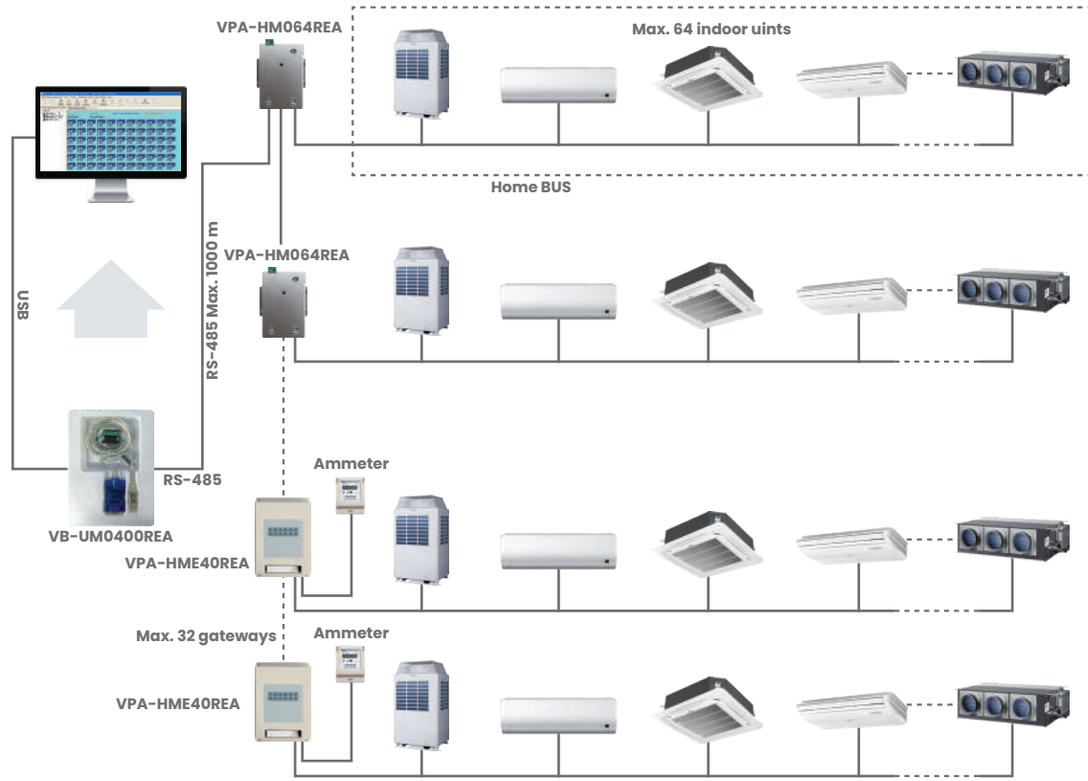
The building management system modules could perfectly integrate air conditioners into the building management system, providing an excellent solution for large commercial areas.



VIVAX BMS monitor system is used to meet the demands of remote monitoring and controlling the AC systems, 3rd party BMS or BAS interface and electricity distribution management i.g the tenant billing.

VB-UM0400REA

- Local control version; convert USB to RS-485
- Max. 400 indoor units can be controlled
- Modbus rtu interface
- Brand new interface design
- Win 7 32 bits / 64 bits, Win 8 Pro, Win 10 Pro
- Max. 32 systems connectable
- VMV 5 system can directly connect with VB-UM0400REA
- Other VMV system outdoor units require VPA-HM064REA
- Electricity charge report (must use VPA-HME40REA)



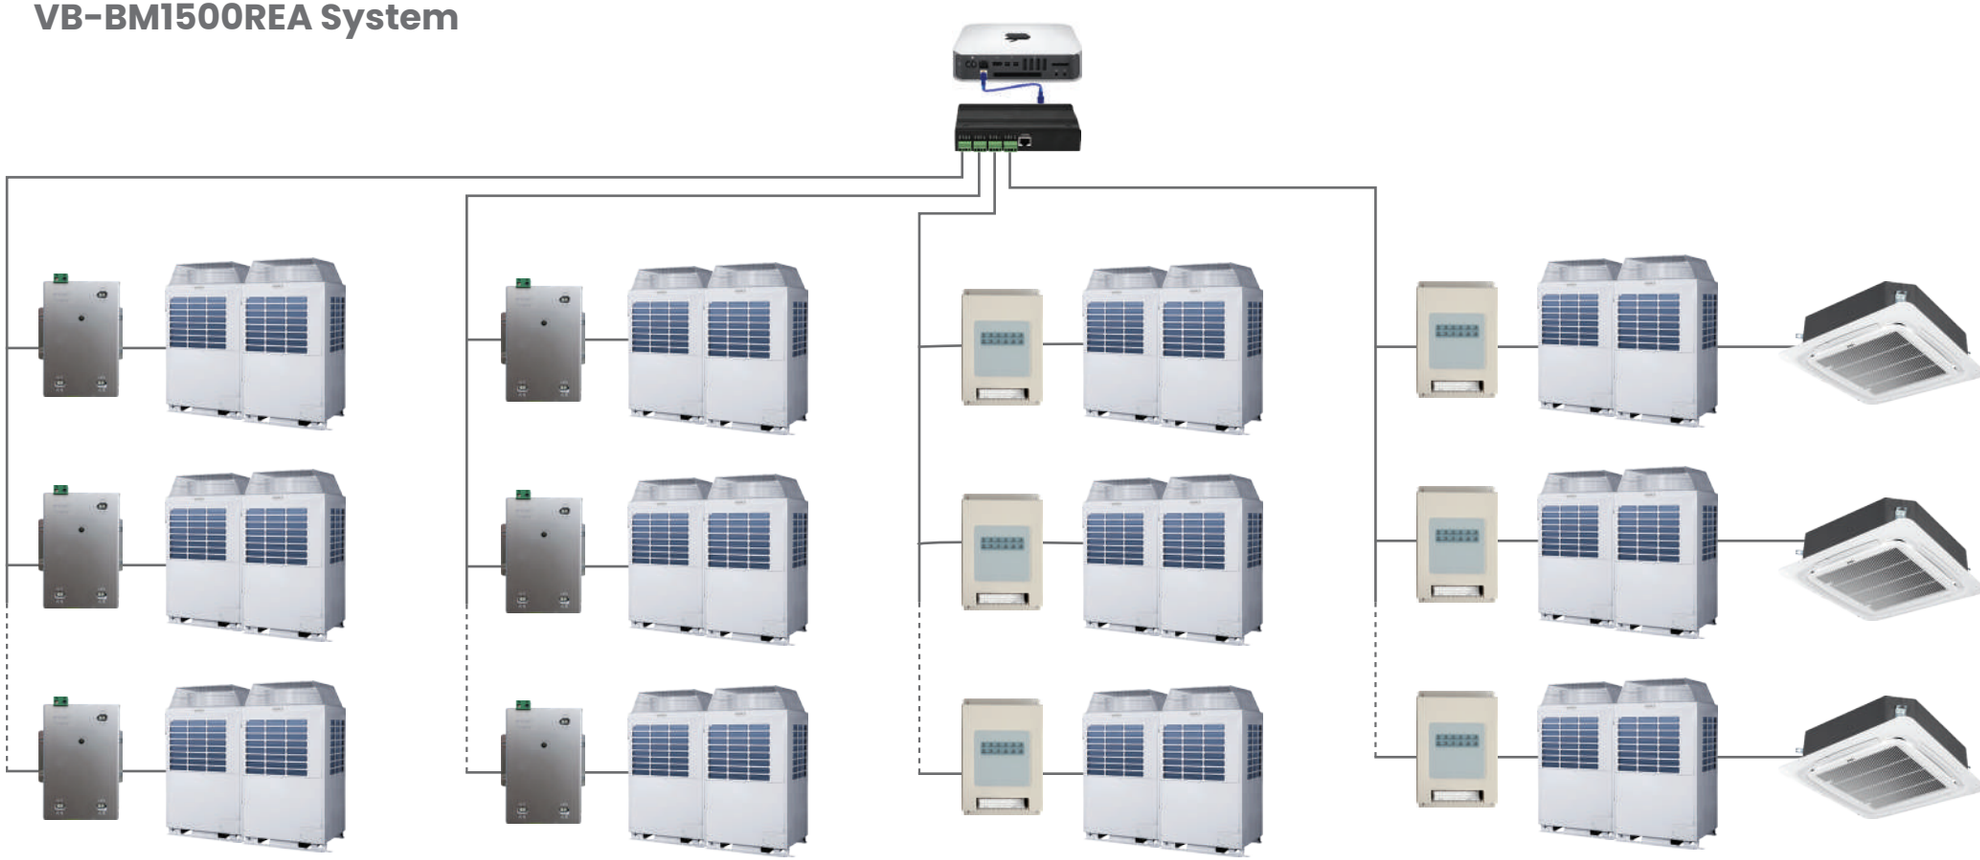
* Each outdoor system requires one VPA-HM064REA; For power consumption function, users should connect VPA-HME40REA and Ammeter.

BMS Monitor

VB-BM1500REA

- Remote monitoring version; third party interface: BACnet ip/ Modbus ip
- Max. 1500 indoor units can be controlled
- Max. 4 groups each group can connect 20 systems
- VMV 5 system outdoor units can directly connect with VB-BM1500REA
- Other VMV system outdoor units require VPA-HM064REA
- Operation status setting & monitoring.
- Schedule setting
- Multi user management with different authorized levels
- Operation and error history log
- Electricity charge report (must use VPA-HME40REA)

VB-BM1500REA System



The adapters offer you an easy and convenient way to integrate air conditioners into various building management system; perfect for large commercial projects.

VIVAX BMS interface devices are used to connect the 3rd party BMS or BAS system, including the Modbus interface, BACnet interface and Lonworks interface etc.

VPA-HM064REA

- Protocol adapter, convert homebus to RS-485
- Gateway: modbus rtu
- Max. 64 indoor units can be connected with one VPA-HM064REA
- VMV 5 system outdoor units can directly connect with central controller VCC-064REA and VCC-256REA or BMS monitor: VB-UM0400REA and VB-BM1500REA
- Other VMV system outdoor units require VPA-HM064REA

VPA-M128REA

- Interface: Modbus
- Match with 12.5-inch webserver central controller VCC-928REA
- Max. 128 indoor units connectable
- Digital tube display Indoor quantity, gateway address, time and date
- Electricity data collection, calculation, distribution and storage

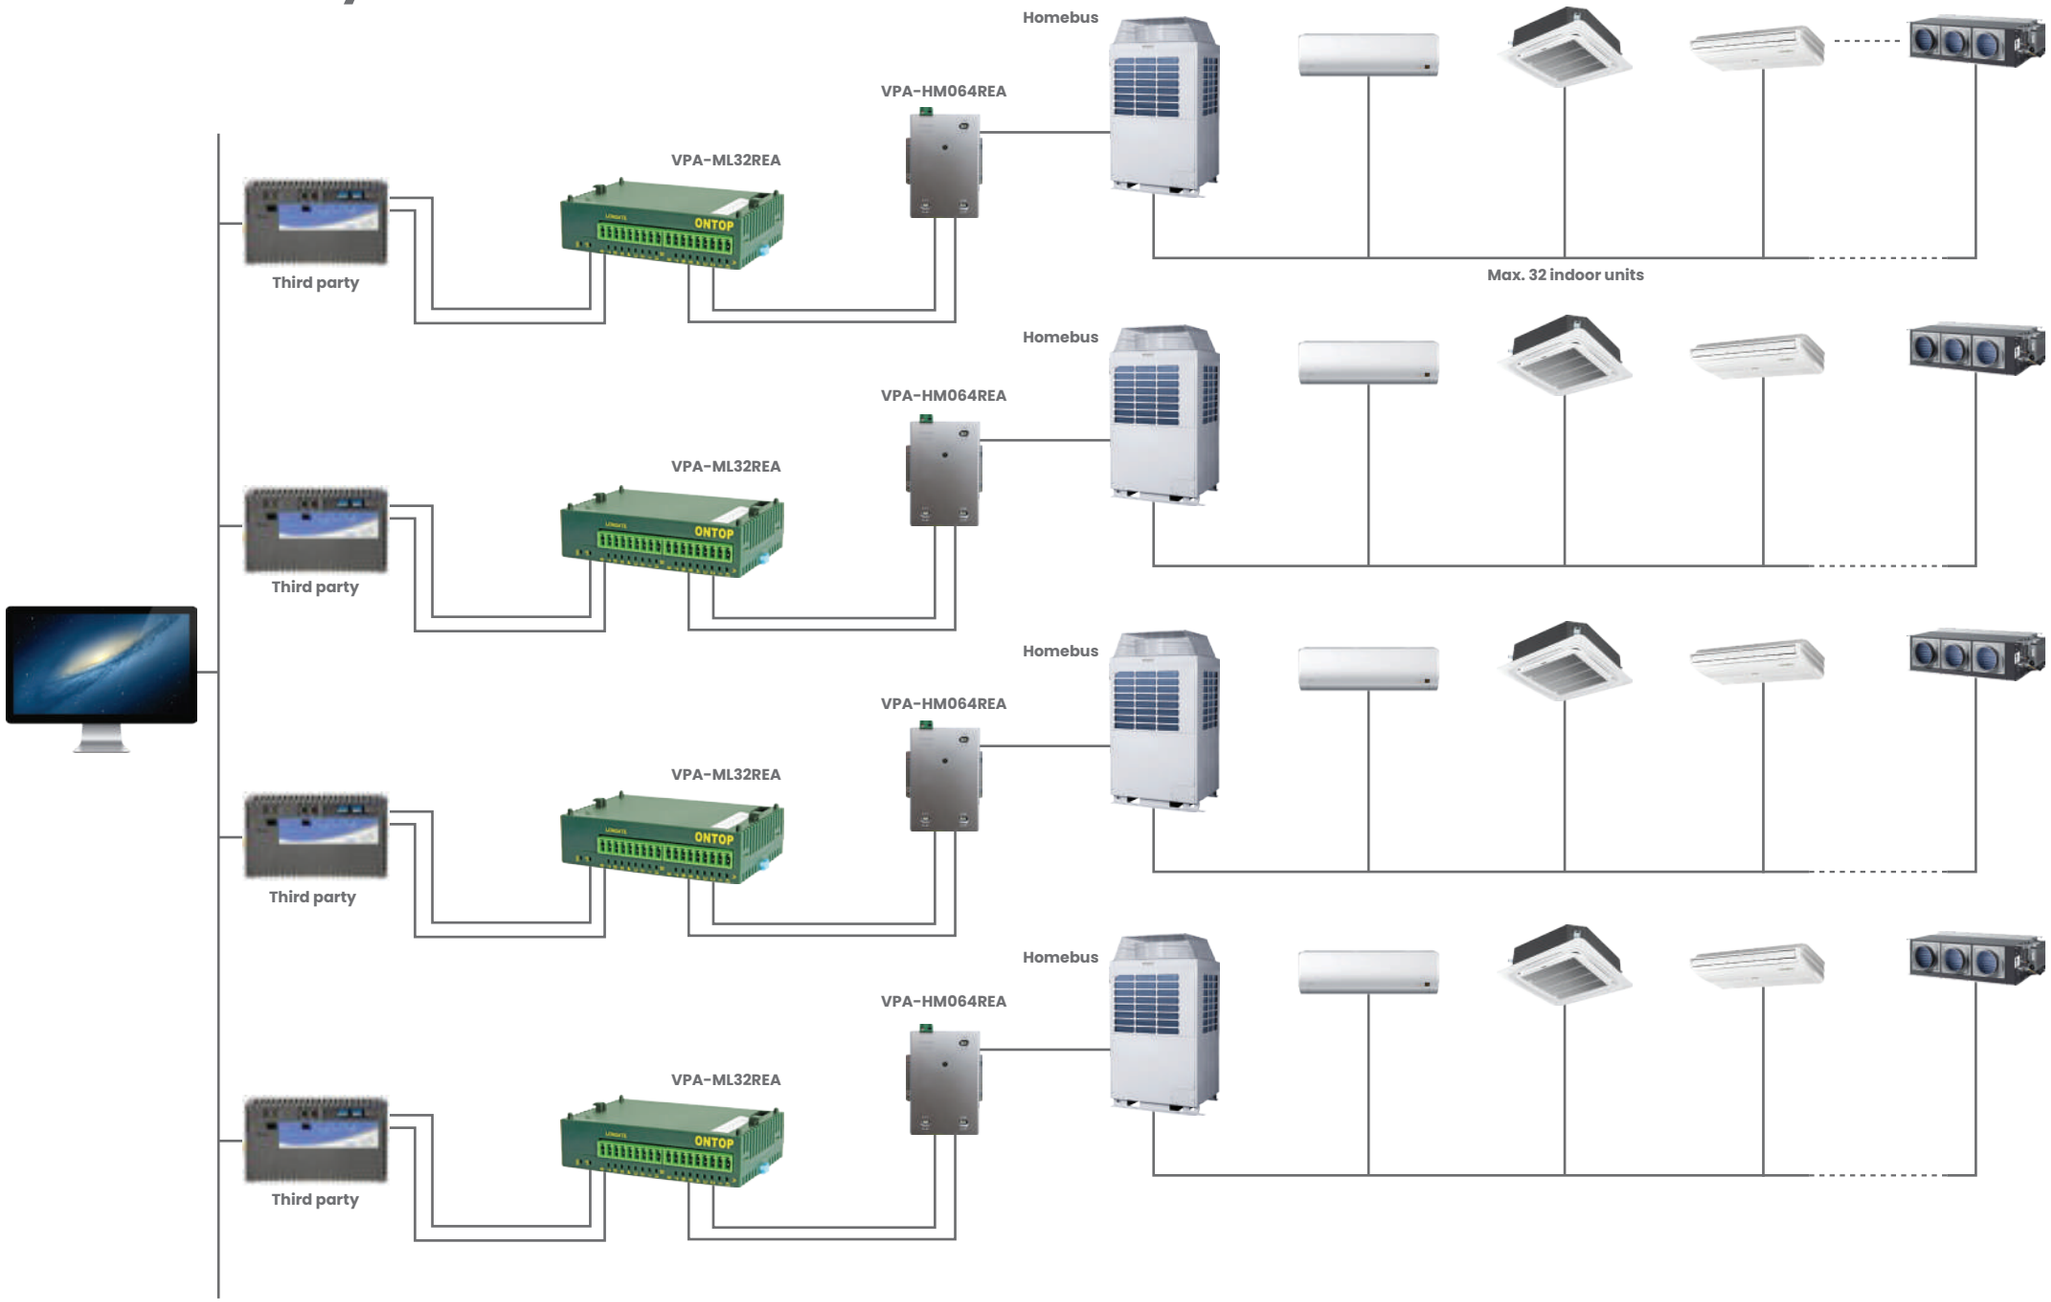
VPA-HME40REA

- Protocol adapter, convert homebus to modbus
- Electricity data collection, calculation, allocation and storage
- Match with BMS (VB-UM0400REA,03A,05,05A). each system requires one VPA-HME40REA
- Max.40 indoor units can be connected with one VPA-HME40REA

VPA-ML32REA

- Protocol adapter, convert modbus rtu to lonworks
- Each system requires one VPA-ML32REA+ VPA-HM064REA
- Max. 32 indoor units can be connected in one system
- External 24V DC power supply is needed

LonWorks System



BMS interface

VPA-MB32REA

- BACnet gateway, convert modbus rtu to BACnet ip
- Max.128 indoor units / 4 systems can be controlled. Max. 32 indoor units for one system
- VMV 5 can connect directly with VPA-MB32REA
- Other VMV systems require VPA-HME40REA or VPA-HM064REA
- BTL certificate

VPA-MK8REA / VPA-MK16REA / VPA-MK64REA

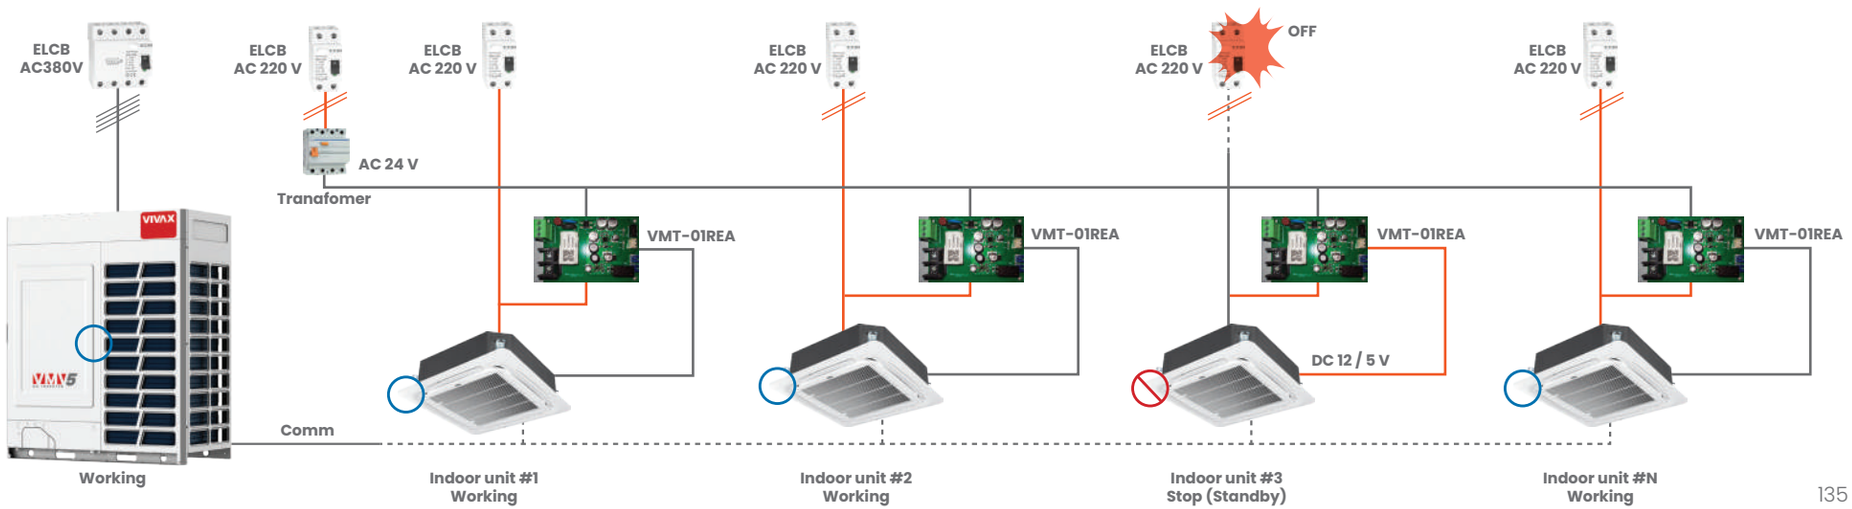
- KNX gateway
- Convert modbus to KNX
- Max. 8 / 16/ 64 indoor units can be connected in one system
- VMV 5 can connect directly
- Other VMV systems require VPA-HM064REA

Multi tenant solution

VMT-01REA

Application Scenario:

- a: The multi tenant site using separate circuit breaker for each indoor unit
- b: The hotel room using key-tag system which cuts off the power of indoor unit directly
- When it is detected that any connected indoor unit is forcibly cut off, the VMT-01REAprovides DC power to the indoor PCB to ensure that the indoor unit maintains standby mode: the EEV is turned off and the control signal is blocked to prevent the system from alarming
- Note: If there is power or communication failure in the indoor computer board, VMT-01REA can not be prevented and detected



Service tool

Name	Design	Model	Functions	For what units
Gather pipe		VGP-01REA	Refrigerant gathering for VMV 5, VMV 5H	2 outdoor units
Gather pipe		VGP-02REA	Refrigerant gathering for VMV 5, VMV 5H	3 outdoor units
Gather pipe		VGP-R01REA	Refrigerant gathering for VMV 5R	2 outdoor units
Gather pipe		VGP-R02REA	Refrigerant gathering for VMV 5R	3 outdoor units
Gather pipe		VGP-R03REA	Refrigerant gathering for VMV 5R	4 outdoor units
Manifold pipe		VBP-01REA	Refrigerant distribution for heat pump VMV 5, VMV 5H, VMV S	Total indoor units capacity less than 33.500W
Manifold pipe		VBP-02REA	Refrigerant distribution for heat pump VMV 5, VMV 5H, VMV S	Total indoor units capacity less than 50.600W, but equal or bigger than 33.500W
Manifold pipe		VBP-03REA	Refrigerant distribution for heat pump VMV 5, VMV 5H, VMV S	Total indoor units capacity less than 73.000 W, but equal or bigger than 50.600 W
Manifold pipe		VBP-04REA	Refrigerant distribution for heat pump VMV 5, VMV 5H, VMV S	Total indoor units capacity less than 135.000W, but equal or bigger than 73.000 W

Name	Design	Model	Functions	For what units
Manifold pipe		VBP-05REA	Refrigerant distribution for heat pump VMV 5, VMV 5H, VMV S	Total indoor capacity less than 204.000 W but equal or bigger than 135.000 W
Manifold pipe		VBP-R01REA	Refrigerant distribution for heat recovery VMV 5R	Total indoor units capacity less than 33.500 W
Manifold pipe		VBP-R02REA	Refrigerant distribution for heat recovery VMV 5R	Total indoor units capacity less than 50.600W, but equal or bigger than 33.500 W
Manifold pipe		VBP-R03REA	Refrigerant distribution for heat recovery VMV 5R	Total indoor units capacity less than 73.000W, but equal or bigger than 50.600 W
Manifold pipe		VBP-R04REA	Refrigerant distribution for heat recovery VMV 5R	Total indoor units capacity less than 135.000 W, but equal or bigger than 73.000 W
Manifold pipe		VBP-R05REA	Refrigerant distribution for heat recovery VMV 5R	Total indoor capacity less than 204.000 W but equal or bigger than 135.000 W
VP box		VPB-01REA1, VPB-02REA1, VPB-03REA1	Valve pipe box for heat recovery VMV 5R	VMV 5R
VP box		VPB-04REA4	Valve pipe box for heat recovery VMV 5R	VMV 5R

Reference projects

Roundliner BR
Prijedor, BiH
